QUESTION 1

The Integrated Log Viewer is presented as a service of SAP NetWeaver AS Java. It provides runtime control for working with log messages. Which of the following statements about the Integrated Log Viewer is true?

A. Log Viewer is the right tool for setting and modifying Severity levels.

B. The Integrated Log Viewer provides options for log and trace configuration. You can add new locations and categories and change the configuration of the existing ones.

C. The Integrated Log Viewer can merge logs within an SAP NetWeaver AS Java instance.

Correct Answer: C

QUESTION 2

The following backups have been created for an SQL Server database in the corresponding chronological order (D stands for a full database backup, L for a transaction log backup, and + for a differential backup): D1 L1 L2 +1 L3 L4 +2 L5 L6 D2 L7 L8 +3 L9. After a disk crash, which results in the loss of at least one data file of this database, the database administrator backs up the current transaction log to create the backup L10. Which are the possible sequences for applying some of the backups to restore the database without any loss of data? (Choose two)

A. D2 L7 L8 L9 L10

B. D1 +1 L3 L4 L5 L6 L7 L8 L9 L10

C. D2 +3 L9

D. D1 +2 L5 L6 +3 L9 L10

E. D1 +1 L3 L4 +2 L5 L6 L7 L8 L9 L10

Correct Answer: AB

QUESTION 3

When the transaction log of the SAP database becomes full, no changes to data in this database can be performed. Which action can be taken to resolve this problem? (Choose three)

A. As the first step, analyze the ABAP short dump generated when the transaction log becomes full.

B. Set the recovery model to simple.

C. Terminate long-running transactions and backup the transaction log.

D. Perform an immediate backup of the transaction log.

E. When the administrator wants to resolve the problem by extending the existing transaction log, but it cannot be extended on its volume due to an exhausted disk space, then he/she must set the database offline, create an additional transaction log file on another drive, and set the database back to online.

Correct Answer: BCD

QUESTION 4

Tuning the performance of an SQL Server instance includes configuring the memory used by this instance on a given host. An optimal memory configuration depends on several aspects such as; memory requirements of the SQL Server itself, hardware resources, other applications installed on the host, or internal usage of the values of the two most important SQL Server parameters - min server memory and max server memory. For which exact purposes can the database administrator use these parameters? (Choose two)

A. To determine the maximum size of memory used by the whole SQL Server system with help of max server memory

B. To determine the maximum size of the buffer pool, because it never increases its memory allocation above the value specified in max server memory

C. To determine the minimum size of the buffer pool, because it never drops its memory allocation below the value specified in min server memory

D. To determine the maximum size of the data cache, because it never increases its memory allocation above the value specified in max server memory

E. To determine the minimum size of the data cache, because it never drops its memory allocation below the value specified in min server memory

Correct Answer: B

QUESTION 5

Which of the following statements about ABAP Support Packages are true? (Choose two)

A. Before importing new ABAP Support Packages, you should apply the newest SPAM/SAINT Update, if not already installed.

B. ABAP Support Packages can be imported in a \\'downtime minimized\\' mode. If you do not select this option, the SAP system will be shut down for some time during the import of the Support Packages.

C. Several ABAP Support Packages can be imported in one queue, using transaction SPAM (Support Package Manager).

Correct Answer: AC
