QUESTION 1

Which of the following output type values can be used in the construct?

- A. PTF
- B. Text
- C. XML
- D. PDF
- E. HTML
- F. WML
- G. SVG

Correct Answer: BCE

QUESTION 2

Consider the following scenario: A company needs to display employee contact information in its intranet. The information is available in XML Format from an XML-aware employee database. It is required that the top of document should contain an index of employee names, so that clicking on an employee name will display the employee's complete contact information (including the employee's name). Which of the following is the BEST approach to meet this requirement?

- A. Create a master stylesheet that includes two stylesheets, one to generate the index, and another to generate the complete information.
- B. Create a stylesheet with two templates in different modes, and use them in the mode attribute of .
- C. Create a stylesheet with one template, and selectively use with to generate the index information.
- D. Create a stylesheet with one template, and use to generate the index information.

Correct Answer: B

QUESTION 3

Consider the following partial XML document:

Assuming the slideshow element shown is the current context node1 which of the following are TRUE if

using DOM's Element interface?

- A. `getAttribute("date")` will return an empty string.

- B. `getAttribute("date")` will return a `DOMException`.
- C. If "author" has a default value defined, `removeAttribute("author")` will delete the author from the element.
- D. If "author" has a default value defined, `removeAttribute("author")` will reset the author to the default value.

Correct Answer: AD

QUESTION 4

When is it necessary to use `xsd:import` instead of `xsd:include` to combine two XML Schemas?

- A. When the two XML Schemas are not on the local machine.
- B. When two different teams write the two XML Schemas.
- C. When the two XML Schemas belong to two different target namespaces.
- D. When the two XML Schemas have nothing in common.

Correct Answer: C

QUESTION 5

Refer to the exhibit to answer the question.

The Web site for a financial services company will include both web-based trading (e-trades) and the financial research reports to help investors make their decisions. As part of the application architecture, note the following:

*

As the data interchange format between the web-based application and the company's legacy trading systems.

*

As the EFT (Electronic Funds Transfer) data interchange format with the customer's bank, from which funds will be withdrawn to settle the trade.

*

As the source format for the financial research reports, which will be searchable and displayable from the web browser.

*

The set of banks is unknown at the time the application is being built.

It is very important to management that the Web site looks professional, that customers have pleasant interaction, and that the site has performance characteristics. Additionally, management wants to ensure that financial reports can still be produced on paper with high-quality typesetting and four-color printing.

Which of the following is MOST likely to be required in the design?

- A. XML from the bank must be validated and transformed into a format expected by the legacy system.

- B. XML from the legacy system must be transformed into a format expected by the bank's application.
- C. The DTD for financial reports must be consistent with element names used by the bank.
- D. The DTD for EFT transactions must be consistent with element names used by the browser.

Correct Answer: A
