QUESTION 1

While setting up global security for a WebSphere environment, system administrators need to be assigned various accesses. In order to configure SSL (Security Socket Layer) through the administrative console, which of the following administrative roles would be required?

- A. Monitor
- B. Security
- C. Configurator
- D. Operator

Correct Answer: C

QUESTION 2

When working with a cluster, a system administrator needs to stop and restart all servers in the cluster. This will ensure that applications running in the cluster remain available at all times. Using the administrative console., which actions will MOST efficiently accomplish this task?

- A. From the Application Servers page select each server. Click stop, then select the server again and click Start.
- B. From the Application Server page select all servers in the cluster, Click Stop, then select all the servers again and click start.
- C. From the Clusters page select the cluster and click stop, then select cluster again and click start.
- D. From the Cluster page select the cluster and click Repplestart.

Correct Answer: D

QUESTION 3

Two enterprise applications need to be installed into the WebSphere Application Server environment. Each application has to rely upon authentication through WebSphere security, but must map to different user registers. Which of the following statements is valid?

- A. Both applications can be installed into the same application server and each need to be mapped to separate user registries.
- B. Both applications can be installed into the same node but different application servers.
- C. The applications need to be installed on separate nodes which can be in the same cell.
- D. The applications need to be installed in separate cells.

Correct Answer: D

QUESTION 4

While packaging an enterprise application, a system administrator notices that the JNDI names of some of the EJBs conflict with existing names in the JNDI namespace. What action should the system administrator take to correct this problem?

- A. Ask the developers to prefix the JNDI names of the EJB references with the name of the application to avoid clashes.
- B. Use the WebSphere administrative console to change the names of the EJB references
- C. Use the Application Server Toolkit (AST) to map the EJB references to unique names in the name space.
- D. Use the WebSphere administrative console to create a separate name space for the application

Correct Answer: C

QUESTION 5

Which of the following statements BEST describes the relationship between WebSphere MQ and WebSphere Platform Messaging?

- A. WebSphere MQ and Platform Messaging are separate and do not share any modules or configuration data.
- B. Platform Messaging relies on WebSphere MQ as the JMS provider.
- C. WebSphere MQ and Platform Messaging must share the same Cloudscape database.
- D. Platform Messaging is simply a scaled down version of WebSphere MQ.

Correct Answer: A
