### QUESTION 1

On a Debian-based system, what command will create a boot disk on the first floppy if your kernel image is named "vmlinux-2.4.18-4"? Type the full command string to accomplish this.

Correct Answer: `mkboot vmlinux-2.4.18-4`

mkboot creates a boot floppy appropriate for the running system. The boot disk is entirely selfcontained, and includes an initial ramdisk image which loads any

necessary SCSI modules for the system. The created boot disk looks for the root filesystem on the device suggested by `/etc/fstab`. The only required argument is

the kernel version to put onto the boot floppy. Syntax:

`mkbootdisk [options] kernel version`. By default mkboot creates the boot disk on first floppy device.

If you want to specify the device use the `--device` option. In debian you should specify the kernel filename which resides on `/boot`.

---

### QUESTION 2

How many cron fields are there for specifying the time to execute a cron job?

- A. 1
- B. 3
- C. 4
- D. 5
- E. 6

Correct Answer: D

---

### QUESTION 3

Which of the following could be used to load kernel modules for a 2.4.x kernel?

- A. `vi/proc/modules`
- B. `rmmod`
- C. `kmod`
- D. `depmod`

Correct Answer: C

In 2.4.x version kernel, `kmod` command is used to load the modules.

---

#### QUESTION 4

You have just added new modules to your system. What command would you execute to rebuild the modules.dep file?

- A. depmod --rebuild
- B. update-dependencies
- C. depmod -a
- D. insmod -dependencies

Correct Answer: C

Depmod creates a list of module dependencies, by reading each module under `/lib/modules/version` and determining what symbols it exports, and what symbols it needs. By default this list is written to `modules.dep` in the same directory.

---

#### QUESTION 5

Which of the following commands can be used to customize all kernel compilation options? (Select THREE)

- A. make config
- B. make menuconfig
- C. make xconfig
- D. make kernelconfig
- E. make configure

Correct Answer: ABC
