### QUESTION 1

What is the purpose of resource isolation?

- A. To reduce the level of broadcast traffic on physical segments.
- B. To ensure that anyone accessing a resource has appropriate integrity.
- C. To automate the creation of access control lists and Trusted Computing Bases.
- D. To enforce access controls, and clearly separate resources from each other.
- E. To make people buy more computers than they really need.

Correct Answer: D

---

### QUESTION 2

You are considering purchasing a VPN solution to protect your organization's information assets. The solution you are reviewing uses RFC-compliant and open-standards encryption schemes. The vendor has submitted the system to a variety of recognized testing authorities. The vendor does not make the source code available to testing authorities. Does this solution adhere to the secure design principle of open design?

- A. No, because the software vendor could have changed the code after testing, which is not verifiable.
- B. No, because the software vendor submitted the software to testing authorities only, and did not make the software available to the public for testing.
- C. Yes, because the methods were tested by recognized testing authorities, and the source code is protected from vandalism.
- D. Yes, because the methods are open, and the system does not rely on the secrecy of its internal mechanisms to provide protection.
- E. No, because if a software vendor refuses to reveal the source code for a product, it cannot comply with the open-design principle.

Correct Answer: D

---

### QUESTION 3

A(n) \_\_\_\_\_ is the first step for determining which technical information assets should be protected.

- A. Network diagram
- B. Business Impact Analysis
- C. Office floor plan
- D. Firewall
