QUESTION 1

When deploying a dedicated DLP Gateway behind a perimeter firewall on an interface leading to the internal network (there is only one internal network):

- A. The DLP Gateway can inspect SMTP traffic if a MS Exchange server is located on the internal network, and it either sends e-mails directly to the Internet using SMTP or sends e-mails to the Internet in SMTP via a mail relay that is located on the perimeter's firewall DMZ network.
- B. The DLP Gateway can inspect internal e-mails (e-mails between two users on the internal network) if the organization's internal mail server is located in the internal network and users are configured to send e-mails to this mail server using SMTP.
- C. User's HTTPS and FTP traffic can be inspected by the R71 DLP Gateway.
- D. The DLP Gateway can inspect e-mails (e-mails between two users on an internal or external network) if the organization's internal mail server is located on another network (not the internal network; for instance the DMZ or a different internal network) and users are configured to send e-mails to this mail server using SMTP.

Correct Answer: A

QUESTION 2

The process that performs the authentication for legacy session authentication is:

- A. cvpnd
- B. fwm
- C. vpnd D. fwssd

Correct Answer: D

QUESTION 3

By default, a standby Security Management Server is automatically synchronized by an active Security Management Server, when:

- A. The user data base is installed.
- B. The standby Security Management Server starts for the first time.
- C. The Security Policy is installed.
- D. The Security Policy is saved.

Correct Answer: C

QUESTION 4

When you add a resource service to a rule, which ONE of the following actions occur?

- A. VPN-1 Secure Client users attempting to connect to the object defined in the Destination column of the rule will receive a new Desktop Policy from the resource.
- B. All packets that match the resource in the rule will be dropped.
- C. All packets matching the resource service rule are analyzed or authenticated, based on the resource properties.
- D. Users attempting to connect to the destination of the rule will be required to authenticate.
- E. All packets matching that rule are either encrypted or decrypted by the defined resource.

Correct Answer: C

QUESTION 5

You want to upgrade a cluster with two members to R76. The Security Management Server and both members are version NGX R65, with the latest Hotfix Accumulator. What is the correct upgrade procedure?

1.
Change the version in the General Properties of the Gateway-cluster object.
 2.
Upgrade the Security Management Server, and reboot.
 3.
Run cpstop on one member, while leaving the other member running. Upgrade one member at a time and reboot after upgrade.
 4.
Reinstall the Security Policy.
- A. 3,2,1,4
 - B. 2,4,3,1
 - C. 1,3,2,4
 - D. 2,3,1,4

Correct Answer: D
