QUESTION 1

Which of the following objects allows you to configure resource settings, to limit the number of concurrent connections?

- A. VSX Gateway
- B. Virtual Router
- C. Management Virtual System
- D. Internal Virtual Switch
- E. External Virtual Switch

Correct Answer: C

QUESTION 2

What is the term used to describe a port or interface that shares traffic from more than one VLAN?

- A. Frame-Strata enabled
- B. VLAN riding
- C. Comprehensive layer-2 label support
- D. VLAN trunking
- E. Comprehensive VLAN Tag support

Correct Answer: D

QUESTION 3

A VSX cluster configuration is built from which three components?

- A. Management Network, Internal Communications Network, Virtual IP Addresses
- B. Synchronization Network, Internal Communications Network, Virtual IP Addresses
- C. Management Network, Internal Virtual Network, Virtual IP Addresses
- D. Synchronization Network, Internal Network, External Network
- E. Synchronization Network, Virtual Network, External Network

Correct Answer: B

QUESTION 4

Which of the following items is most commonly configured as the default Gateway for a Management Virtual System?

- A. Interface leading to the management network
- B. Same setting as the default Gateway of the External Virtual Router; typically this is a perimeter router.
- C. External Virtual Router
- D. Internal Virtual Router
- E. Interface leading to the synchronization network

Correct Answer: C

QUESTION 5

Consider the following scenario: You have two VSX Gateways configured for High Availability. Each has one dedicated management interface, one synchronization interface, one external interface, and two interfaces used to connect to protected customer networks. How many cluster interfaces do you have in this configuration?

- A. Three; one Management Virtual System cluster, one External Virtual Router cluster, and one Virtual System cluster containing both customer Virtual Systems
- B. Five; one VSX Gateway cluster, one Management Virtual System Cluster, one External Virtual Router cluster, and two Virtual System clusters
- C. Two; one External Virtual Router cluster, and one cluster containing all Virtual Systems
- D. One; one VSX cluster containing all components
- E. Four; one Management Virtual System cluster, one External Virtual Router cluster, and two Virtual System clusters

Correct Answer: B
