QUESTION 1

Both SmartCenter Server and Provider-1 can be used for central configuration, management, and monitoring of multiple VSX Gateways and Virtual Systems. What criteria are used to decide which management model is used?

A. Licensing restrictions and costs, administrative requirements, and operation model

B. The size of the deployment and planned expansion, administrative requirements, and security model

C. The size of the deployment and planned expansion, end-user requirements, operation model, and licensing restrictions

D. The size of the deployment and planned expansion, administrative requirements, operation model, and licensing restrictions

E. The size of the deployment and planned expansion, end-user requirements, and security model

Correct Answer: D

QUESTION 2

Which of the following statements is TRUE concerning a VSX NGX deployment?

A. A separate management interface is required for a management network to access and control a VSX Gateway.

B. Multiple VSX Administrators can be configured with granular permission control in a SmartCenter Server management environment.

C. VSX Administrators can manage VSX Gateways and clusters through the Internet. No special management interface is required.

D. The functionality of VSX NGX is based on NG FP0.

E. All VSX virtual devices now share all functions of a standard NGX Security Gateway.

Correct Answer: C

QUESTION 3

When deploying a VSX Gateway managed by a SmartCenter Server, how many Certificate Authorities will the deployment have?

A. One for each Virtual System and Virtual Router configured on the VSX Gateway

B. One, shared by all components

C. Two; one for the SmartCenter Server, and one shared by all Virtual Systems and Virtual Routers

D. One for each Virtual System configured on the VSX Gateway

E. Three; one for the SmartCenter Server, one shared by all Virtual Systems, and one shared by the Virtual Routers

Correct Answer: B

QUESTION 4

When configuring a VLAN environment for your VSX Gateway, you must associate each VLAN with an interface and an IP address. Where is each VLAN setting configured?

A. System Interfaces tab of the VSX Gateway object

B. Add/Edit Interface screen, accessed from the Topology tab of the Virtual Router object

C. System Interfaces Allocation tab of the VSX Gateway object

D. Add/Edit Interface screen, accessed from the Topology tab of the Virtual System object

E. VLAN Configuration tab of the VSX Gateway object

Correct Answer: D

QUESTION 5

Which of the following VLAN membership types is considered explicit in its propagation?

A. Application-based

B. Protocol-based

C. Session-based

D. MAC address-based

Correct Answer: B
