QUESTION 1

An administrator wants to ensure that a copy of a virtual machine can still power up on another data center during a disaster.

Which feature meets this requirement?

- A. vSphere Replication
- B. vMotion
- C. vSphere High Availability
- D. Fault Tolerance

Correct Answer: A

QUESTION 2

Which vSphere feature mitigates common optimization challenges?

- A. vSphere Trust Authority
- B. vSphere High Availability
- C. vSphere DRS
- D. vSphere Fault Tolerance

Correct Answer: C

QUESTION 3

An operator needs to take a snapshot of a VM before an upgrade. The application team needs the ability to restore the VM with a consistent state of the guest file system while keeping the VM online.

How can the operator accomplish this task?

- A. Right Click VM > Power > Power Off > Actions > Compatibility > Upgrade VM Compatibility > OK
- B. Right click VM > Migrate > Change Compute resource > Select Host > Finish
- C. Right click VM > Snapshots > Take Snapshot > Choose option to quiesce guest file system > OK
- D. Power Off VM > right click VM > Snapshots > Take Snapshot > OK

Correct Answer: C

QUESTION 4

Which feature must an administrator use to revert back to the previous of a VM template?

- A. VM Snapshots
- B. Content Library
- C. VMware Tools
- D. Storage vMotion

Correct Answer: B

QUESTION 5

Which problem is solved by migrating virtual machines (VMs) using vSphere vMotion?

- A. A vSphere cluster that needs to be upgraded without any VM downtime.
- B. A problem that occurred during VM patching and a roll-back is needed.
- C. The names of the VM files that do not match the inventory name of the VM.
- D. Heavy storage traffic and latency that are concentrated in a few datastores.

Correct Answer: C
