-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Scenario: A Citrix Administrator configured a Citrix ADC active-passive, high availability (HA) pair. The HA pair failed over and customers were unable to access hosted websites. The administrator troubleshoots and discovers that the upstream router is NOT updating its ARP table.

What can the administrator configure to resolve this issue?

- A. Independent Network Configuration (INC) mode
- B. Route monitor
- C. HA monitor
- D. Virtual MAC

Correct Answer: D

---

### QUESTION 2

Which four authentication types can a Citrix Administrator use for Citrix ADC authentication, authorization, and auditing (AAA) multifactor authentication? (Choose four.)

- A. RADIUS
- B. OAuth
- C. FIDO2
- D. NTLM
- E. ADFS
- F. LDAP
- G. TACACS+

Correct Answer: ABCF

---

### QUESTION 3

Scenario: A Citrix Administrator created and bound multiple content switching policies. During testing, attempts to access <https://cs.mycompany.com> resulted in the error message below:

HTTP 503 Service Unavailable

In a Citrix ADC configuration, what can the administrator do to fix the error?

- A. Disable the spillover redirect URL.
- B. Bind a certificate

- C. Enable the content switching feature
- D. Check the priorities of the existing policies

Correct Answer: D

---

#### QUESTION 4

Which mode does a Citrix Administrator need to configure to allow a Citrix ADC to control the packetforwarding function based on the route table lookups?

- A. MBF
- B. USIP
- C. Layer 2
- D. Layer 3

Correct Answer: D

Layer 3 mode controls the Layer 3 forwarding function. You can use this mode to configure a Citrix ADC appliance to look at its routing table and forward packets that are not destined for it. <https://docs.citrix.com/en-us/citrix-adc/current-release/getting-started-with-citrix-adc/configure-system-settings/configure-modes-packet-forwarding.html>

---

#### QUESTION 5

Scenario: Client connections to certain vServers are abnormally high. A Citrix Administrator needs to be alerted whenever the connections pass a certain threshold.

How can the administrator use Citrix Application Delivery Management (ADM) to accomplish this?

- A. Configure network reporting on the Citrix ADM by setting the threshold and email address.
- B. Configure SMTP reporting on the Citrix ADM by adding the threshold and email address.
- C. Configure TCP Insight on the Citrix ADM.
- D. Configure specific alerts for vServers using Citrix ADM.

Correct Answer: A

<https://docs.citrix.com/en-us/citrix-application-delivery-management-service/networks/network-reporting.html>
