QUESTION 1

Scenario: To receive data alerts for failures, a Citrix Administrator is configuring SNMP on the Citrix ADC. The administrator is confident that the manager, alarms and SNMP traps are configured correctly. The following week, there is a Citrix ADC-related outage and the administrator does NOT receive any alerts.

What could be the reason for this alert failure?

- A. The Citrix Web App Firewall is blocking the alerts from going out.
- B. The community name was NOT configured in the Citrix ADC SNMP trap destination settings.
- C. The Citrix ADC only has standard licensing.
- D. The Citrix ADC is configured for SNMP version 1.

Correct Answer: B

QUESTION 2

Scenario: While attempting to access web server that is load balanced by a Citrix ADC using HTTPS, a user receives the message below.

SSL/TLS error: You have not chosen to trust "Certificate Authority" the issuer of the server's security certificate.

What can a Citrix Administrator do to prevent users from viewing this message?

- A. Ensure that users have the certificate's private key.
- B. Ensure that users have the certificate's public key.
- C. Ensure that the server certificate is linked to its respective intermediate and root certificates.
- D. Ensure that users have the server certificate installed.

Correct Answer: C

QUESTION 3

Scenario: A Citrix Administrator manages an environment that has three SSL websites, all serving the same content.

www.company.com

www.company.net

www.company.org

The administrator would like to consolidate the websites into a single, load-balanced SSL vServer.

What can the administrator bind to use a single SSL vServer?

- A. A wildcard certificate to a single SSL vServer
- B. A wildcard certificate to a content-switching vServer
- C. The certificate of each website to a single SSL vServer
- D. A multiple SAN certificate to a single SSL vServer

Correct Answer: C

QUESTION 4

Scenario: A Citrix Administrator manages an environment that has an externally accessible website. The administrator would like to provide end-to-end encryption and use features such as caching and compression on the Citrix ADC. Which setting should the administrator configure to meet this requirement?

- A. SSL front-end, HTTP backend
- B. SSL_TCP front-end, SSL_TCP backend
- C. SSL front-end, SSL backend
- D. SSL_TCP front-end, TCP backend

Correct Answer: C

QUESTION 5

A Citrix Administrator wants to configure independent and isolated access on a single appliance to allow three different departments to manage and isolate their own applications. What can the administrator configure to isolate department-level administration?

- A. Admin partitions that use dedicated VLANs
- B. A SNIP in each partition, and bind a VLAN for the department
- C. Policy-based routes for each department in the nsroot partition
- D. Dedicated routes in the admin partitions for each department

Correct Answer: A
