### QUESTION 1

Scenario: A Citrix Engineer is enrolling iOS devices. After the certificate and profile installation, users are unable to access the Worx Store.

What are two possible causes of this behavior? (Choose two.)

- A. The maximum number of allowed users has been met.
- B. The XenMobile Enterprise license does NOT exist.
- C. The NetScaler Universal Access licenses do NOT exist.
- D. The maximum number of devices for each user has been met.

Correct Answer: AC

---

### QUESTION 2

Scenario: A company with 20,000 enrolled users recently acquired another company with 7,000 users. All new users also will need access to mobile MDX apps. Each server's specifications include four vCPUs and 16 GB of RAM.

What is the minimum amount of XenMobile cluster nodes required to support this environment?

- A. One
- B. Two
- C. Three
- D. Four

Correct Answer: C

---

### QUESTION 3

Scenario: For testing purposes, an Android application developer needs to allow an unwrapped application to receive data from a wrapped version of WorxMail. WorxMail must remain in a restricted state.

Which action could a Citrix Engineer take to allow the wrapped application to interact with an unmanaged application while maintaining the prerequisite security standards?

- A. Update the Restricted Open-In exception list.
- B. Update the document exchange policy to Unrestricted.
- C. Update the Public file encryption exclusions list for the application.
- D. Update the desired application to the App Interaction Security Group.

Correct Answer: A

---

#### QUESTION 4

Which XenMobile Windows Phone 8.1 policy should a Citrix Engineer configure in order to deploy Worx MDX apps to a Windows Phone 8.1 device?

- A. Enterprise Hub policy
- B. Exchange policy
- C. App Inventory policy
- D. Sideload Key policy

Correct Answer: A

---

#### QUESTION 5

After publishing an Android MDX application, a Citrix Engineer finds that the application only installs on devices running Android OS 4.3 and above, instead of all Android devices.

What is the likely cause of this issue?

- A. The key used on the certificate to wrap the application uses a DSA key algorithm.
- B. The certificate used to wrap the application has expired.
- C. The certificate used to wrap the application uses SHA1 and DSA Signing algorithms.
- D. The key size of the certificate used to wrap the application is 2048 bits.

Correct Answer: D
