-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Why does using PowerShell help manage the image release process?

- A. Because it can script automatic upgrades of the deployment template
- B. Because it provides centralized, automated single image management
- C. Because it facilitates consistent deployment of base images
- D. Because PowerShell scripts can be executed from the same network share as the deployment template

Correct Answer: C

QUESTION 2

Which aspect of the new storage system's performance requirements is critical to the success of the project and should be determined before any purchase takes place?

- A. Whether it supports automatic tiering
- B. The number of SSD drives it will hold
- C. Whether 8Gb/s Fibre Channel or 10Gb/s Ethernet technology provides more storage bandwidth
- D. The number of IOPS it must support to host the required amount of pooled and dedicated virtual desktops

Correct Answer: A

QUESTION 3

Scenario: CGE decided to virtualize its infrastructure workloads and provide a virtual solution to all end users. The infrastructure workloads include Delivery Controllers, StoreFront servers, License Servers, and Microsoft SQL Servers for databases. Why is separating workloads by roles, creating a resource pool comprising a maximum of 16 XenServer hosts, and implementing multiple storage repositories for virtual disks, XenMotion, high availability, and backups for disaster recovery purposes the best design solution?

- A. It ensures the logical separation of infrastructure and virtual desktop workloads, and facilitates management and expansion capabilities.
- B. It provides workload flexibility to more efficiently leverage available resources within a resource pool, and facilitates expansion options. In addition, daily backups create minimal downtime for critical workloads.
- C. It separates infrastructure and virtual desktop workloads according to resource usage characteristics to avoid conflicting situations. In addition, it provides critical database services with sufficient workload-specific resources and failover capabilities.
- D. It ensures the logical separation of all workloads and virtual desktops. In addition, the backup solution reduces the risk of data loss and minimizes downtime.

Correct Answer: A

QUESTION 4

Why is database high availability an essential component of a production environment?

- A. Because the Delivery Controller is stateless
- B. Because server maintenance can be performed online
- C. Because it prevents local host cache corruption
- D. Because user data loss is prevented if a session is disconnected

Correct Answer: A

QUESTION 5

The company plans to reduce their storage requirement by using thin provisioning with XenServer hosts. Which storage option should the architect verify for capability in the current environment?

- A. NFS
- B. CIFS
- C. iSCSI
- D. Fibre Channel

Correct Answer: A
