QUESTION 1

Scenario: CGE needs to define its management process for desktop image releases. Some groups need a process for version control that includes thorough testing prior to production. Why does using Windows Deployment Services and deploying a standard base image to virtual desktops help manage the image versioning process?

- A. It enables rapid rollback.
- B. It automates deployment of current and legacy OS versions.
- C. It leverages Hyper-V snapshots.
- D. It automatically deploys the latest drivers and patches.

Correct Answer: D

QUESTION 2

The company plans to reduce their storage requirement by using thin provisioning with XenServer hosts. Which storage option should the architect verify for capability in the current environment?

- A. NFS
- B. CIFS
- C. iSCSI
- D. Fibre Channel

Correct Answer: A

QUESTION 3

Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models.

What are the benefits of using Hosted VDI and manually installing the operating system?

- A. Highest user density and lowest cost
- B. Highest level of user personalization
- C. Lowest storage performance requirement and highest user density
- D. Lowest cost and highest application compatibility

Correct Answer: B

QUESTION 4

Scenario:

A Citrix Architect identifies a fault in the Active Directory design for CGE's existing XenApp environments. Group Policy Objects (GPOs) from OUs across the Active Directory apply when end users log on to XenApp applications, creating undesirable end-user experiences. The architect determines that CGE needs full control over which GPOs apply in the new environment.

Why would creating Citrix policies within a GPO, filtered by IP address, ensure full control over which GPOs are applied?

- A. It provides central management and control.
- B. It ensures that only policies with the correct filter in Active Directory are applied.
- C. It ensures that only settings located in the root OU are applied.
- D. It ensures that only Citrix policies are applied on the Virtual Desktop Agents where end users log on.

Correct Answer: C

QUESTION 5

Why is deploying four NetScaler appliances - two in the primary and two in the secondary datacenter with a NetScaler virtual server binded to a redirection policy, the best remote access design?

- A. It allows end users to connect to their primary datacenter through a secure, reliable, and cost-effective solution.
- B. It provides redundancy, while optimizing external WAN traffic.
- C. It segments the Gateway and load-balancing features of the NetScaler appliances.
- D. It allows for the expected expansion of remote access usage and provides SSL VPN functionality for future needs.

Correct Answer: A
