QUESTION 1

Scenario: A Citrix Architect needs to redesign an existing XenApp and XenDesktop environment to use Machine Creation Services (MCS). During the design discussions, the locations for the MCS-provisioned thin clone machine disks are proposed as shown in the Exhibit.

Click the Exhibit button to view the details.
Which potential concern should the architect address with the customer before proceeding with this configuration? (Choose two.)

A. It is limited to NFS shared storage.

B. It will require substantial read IOPS from the shared storage location during machine creation and updates.

C. It will require substantial write IOPS to the shared storage location as temporary data is written.

D. It will require more storage to be allocated on the VM hosts compared with other options.

E. It is limited to certain hypervisors.

Correct Answer: CE

QUESTION 2

Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment.

The architect has identified the Resource Layer requirements shown in the Exhibit.

Click the Exhibit button to view the requirements.

User Group	Do user settings need to persist?	Assigned FlexCast model	Access required to profile folders?	Additional Requirements
Accountants	Yes	Published apps	Yes, the following folders should be available: • Contacts • Desktop • Favorites • My Documents	Needs synchronization of a specific application log file within the AppData folder
Executives	Yes	Remote PC Access	Yes, the following folders should be available: • Contacts • Desktop • Downloads • Favorites • My Documents	Needs ability to use resource locally while offline
Graphic Designers	Yes	Hosted VDI (Static / persistent, uses vGPU)	No	No
Customer Service	No	Published Desktop (Server OS)	No	No

Which Citrix Profile Management feature can help the architect address the Accountants group requirements?

A. Profile streaming

B. File exclusions

C. File inclusions

D. Profile caching

Correct Answer: C

QUESTION 3

Scenario: A Citrix Architect designed an active/passive XenApp and XenDesktop environment for a customer, where the passive Site serves as the disaster recovery Site for all users.

The architect configured a DFS root for user profiles and redirected folders and configured DFS-R to replicate the user profiles and data to a fileserver in the disaster recovery Site.

During failover testing, no issues were reported; however, today the customer has an unexpected outage in StoreFront on the active Site which causes sessions to start flowing to the passive Site.

The customer reports that several users are experiencing issues logging on and has also stated that Citrix Director is NOT showing any issues for the passive Site.

What is likely causing this issue?

A. DFS-R is NOT supported for use with Citrix Profile Management.

B. StoreFront in the passive Site is aggregating Virtual Delivery Agent (VDA) machines in the primary Site.

C. Virtual Delivery Agent (VDA) machines in the passive Site are NOT registered.

D. User sessions in the primary datacenter are still active.

Correct Answer: A

QUESTION 4

Scenario: A Citrix Architect needs to implement XenDesktop in an environment. The XenDesktop design requires enabling TLS encryption between components to ensure Payment Card Industry (PCI) compliance. A PCI audit determines that TLS must be used for communication with the Virtual Delivery Agent (VDA) machines.

Which three tasks should the architect perform to enable TLS on VDA machines? (Choose three.)

A. Run a Citrix-provided PowerShell script on the VDA machine image to enable TLS

B. Enable TLS for Delivery Groups on the Delivery Controller

C. Run a Citrix-provided PowerShell script on the Delivery Controllers.

D. Enable TLS for the XenDesktop Site

E. Deploy certificates to the Delivery Controller

F. Deploy certificates to the VDA machines

Correct Answer: BCD

QUESTION 5

Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The design will require three different StoreFront Stores and three corresponding Citrix Receiver for Web sites. Each different Store and Citrix Receiver for Web site will serve different business units. Each of these will also require their own branding and SSL certificate. The solution should remain supported by Citrix.

The architect has already installed StoreFront on a server.

How can the architect achieve the desired design while keeping cost and maintenance requirements as low as possible?

A. Create two extra IIS Sites, bind the certificates in IIS manager, copy the StoreFront configurations to the two new IIS Sites, and use a text editor to configure all three StoreFront Stores.

B. Deploy two extra virtual servers, bind the certificates in IIS manager, and install StoreFront again on each new virtual server.

C. Create two extra IIS Sites, bind the certificates in IIS manager, copy the StoreFront configuration to the two new IIS Sites, and use the StoreFront console to configure all three StoreFront Stores.

D. Create two extra IIS Sites, bind the certificates in IIS manager, use PowerShell to deploy additional Stores to the two new IIS Sites, and use a text editor to configure all three StoreFront Stores.

Correct Answer: C
