- ⚙️ **100% Money Back** Guarantee
- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

Scenario: A Citrix Architect is assessing an existing infrastructure for a company that has storage challenges as a result of hyper-growth. They currently have a large IT infrastructure that consists of 15 hypervisor hosts and more than 200 virtual machines (VMs) worldwide. Management has advised the architect that they need to improve their storage infrastructure to include high performance and scalability.

Which storage solution should the architect implement within this infrastructure?

- A. DAS
- B. SAN
- C. NAS
- D. Local

Correct Answer: B

QUESTION 2

Scenario: A Citrix Architect designed an active-passive Citrix Virtual Apps and Desktops environment, where the passive data center serves as the disaster recovery (DR) data center for all users.

Twelve items have been configured:

Citrix ADC Global Server Load Balancing (GSLB) to provide single URL direction to the active data center.

GSLB has health monitors configured for the load balanced servers.

Citrix Gateways are on both data centers.

Citrix ADC load balancing occurs for StoreFront and Delivery Controller XML services.

A single Citrix Virtual Apps and Desktops Site exists.

Four Delivery Controllers are members of the Site.

Two Delivery Controllers are members of the Primary Zone in the active data center.

Two Delivery Controllers are members of the Satellite Zone in the passive data center.

SQL is deployed in the active data center.

Local Host Cache is enabled.

Two StoreFront servers are deployed in each data center aggregating resources from the Delivery Controllers in the respective data center.

Virtual Delivery Agent (VDA) machines are deployed in both data centers and configured to register with

Delivery Controllers in their zone.

What would happen if the Delivery Controllers in the primary data center were turned off?

- A. VDA machines from the primary data center would register with the Delivery Controllers in the passive data center.
- B. StoreFront in the primary data center would still be able to launch sessions.
- C. GSLB will start redirecting connections to the secondary data center.
- D. GSLB will NOT identify that the Delivery Controllers are down and sessions CANNOT launch.

Correct Answer: B

QUESTION 3

Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. Currently, the environment is configured with 2 locations with identical Citrix Virtual Desktops Sites. Each Site has 2

Delivery Controllers, 2 StoreFront servers, and 1 Citrix ADC high-availability pair. The same applications have been published from both Sites for all users. Two zones (Zone A and Zone B) are configured in each Site with 1 Delivery Controller in each zone. The Microsoft Exchange server is only accessible from Virtual Delivery Agent (VDA) machines in Zone A in each Site.

Six access requirements have been identified:

Users should have a single URL when accessing resources from different Sites.

Users should always connect to the data center closest to their location.

Applications added to Favorites within the Citrix Workspace app should be retained when accessed from different Sites.

Launched applications and desktops should always connect through a local Citrix ADC.

No duplication of applications published from different Sites.

Microsoft Outlook should always launch in Zone A.

What should the architect recommend to ensure that Microsoft Outlook always launches from Zone A for every user?

- A. Configure zone preference based on user location.
- B. Configure Zone A as the application Home Zone for Microsoft Outlook.
- C. Move a Delivery Controller from Zone B to Zone A.

D. Designate Zone A as the Home Zone for all users.

Correct Answer: B

QUESTION 4

Scenario: A Citrix Architect designing a new Citrix Virtual Apps and Desktops environment needs to determine which endpoints to include. Based on discussions with various departments, the user requirements listed in the exhibit were collected.

Click the Exhibit button to view the requirements.

User Group	Typical Location	High-security User Group?	FlexCast Model Used	Peripheral Requirements	User Mobility	User Workload
Finance	Internal	Yes	Published Apps	None	None	Low
Product Development	Internal	Yes	Static/Persistent Hosted Desktop	USB Printers	None	High
Sales	Roaming	No	Published Apps and Desktops	USB Printers and Projectors	High	Medium

In addition to the user requirements, the architect must address the organizational requirement of minimizing endpoint management effort.

Which endpoint type should the architect use for the Sales Group, based on the requirements?

- A. Corporate-owned thin client
- B. Bring-your-own device (BYOD) laptop/notebook
- C. Corporate-owned smartphone
- D. Corporate-owned laptop/notebook
- E. Bring-your-own device (BYOD) smartphone

Correct Answer: B

QUESTION 5

Scenario: A Citrix Architect is designing a new Citrix Virtual Apps and Desktops environment. The Site will contain two Delivery Controllers. All machines are running on a single hypervisor platform. As part of the deployment, management has advised they want a database high-availability (HA) solution to protect the environment against the loss of a physical server.

Additional considerations for the SQL HA:

Downtime for Citrix administrative functions should be minimized.

Additional hardware or resources should be minimized.

Limited knowledge available to configure and maintain SQL infrastructure.

Which HA configuration should the architect use for this deployment?

- A. Local Host Cache
- B. VM-Level HA
- C. SQL Always On
- D. SQL Mirroring
- E. SQL Clustering

Correct Answer: A
