QUESTION 1

Scenario: An administrator needs to prepare a group of XenApp 6.5 servers for a scheduled maintenance window. The servers need to accept connections from users that already have existing sessions but disallow any new connections. The administrator also needs to ensure that the servers remain in maintenance mode after the software updates are performed, which will require multiple restarts. Which setting can the administrator use from the AppCenter?

- A. Prohibit logons only
- B. Drain until next restart
- C. Allow logons and reconnections
- D. Prohibit logons until server restart
- E. Prohibit logons and reconnections

Correct Answer: A

QUESTION 2

Scenario: An administrator manages a XenApp farm that uses Citrix Provisioning Services to automate the addition of XenApp servers to the farm. The administrator must implement a solution to automate the addition of new servers to the published resources, load evaluators, Citrix policies and load balancing policies.

Which two should the administrator configure to meet the requirements of the scenario? (Choose two.)

- A. Zones
- B. Policies
- C. Worker groups
- D. Load evaluators

Correct Answer: BC

QUESTION 3

Scenario: A Citrix administrator manages a XenApp farm with hundreds of task workers. Management desires that user profiles be kept to a minimum size and stored in a centralized location. User changes must NOT be retained at logoff.

Based on these requirements, which type of profile should the administrator implement?

- A. Local
- B. Roaming
- C. Mandatory
- D. Citrix Profile Management

Correct Answer: C

QUESTION 4

Scenario: A XenApp administrator is tasked with delivering a new application to the XenApp farm. During testing, the administrator finds that the application is incompatible with existing applications installed on the XenApp servers. He CANNOT install the application on the servers.

The administrator is in the process of publishing this application. Click the "Exhibit" button to view a screenshot of the Publish Application window.

Which streaming option should the administrator use to publish the application so that iPhone mobile device users can access the application?

A. Streamed to client

- B. Accessed from a server- Streamed to server
- C. Accessed from a server- Installed application
- D. Streamed if possible, otherwise accessed from a server

Correct Answer: B

QUESTION 5

Scenario: A Citrix administrator manages a XenApp farm with 3,000 users. The users run the same set of applications every day. Users complain that Application B takes a long time to launch after they exit Application A. The administrator is required to implement a solution to speed up application launch.

What should the administrator do in order to ensure that users are able to launch Application B quickly after they exit Application A?

- A. Configure Session Linger.
- B. Set Linger Disconnect Timer Interval to 0.
- C. Set Pre-launch Terminate Timer Interval to 0.
- D. Create a Pre-launch session for Application B.

Correct Answer: A
