QUESTION 1

Scenario: Users are receiving the error shown in the attached exhibit when connecting to Notepad on XenApp.

The administrator runs the QUERY FARM command on the server and receives results in the second attached exhibit.

Which configuration component is causing the high application load?

- A. An Active Directory group policy
- B. A load balancing preference policy
- C. A load evaluator applied to the server
- D. A load evaluator applied to the application

Correct Answer: D

QUESTION 2

Scenario: An administrator has published Microsoft Word on two identical servers in a server farm. There are 75 users in the environment, and each server must be allowed to accept all 75 user sessions for failover purposes. All users start work at 09:00 in the morning. The administrator wants to prevent server failure due to excessive connection attempts during this logon time.

Which option will meet the needs of this scenario?

- A. Load balancing policy
- B. Default load evaluator
- C. Server session policy
- D. Advanced load evaluator

Correct Answer: B

QUESTION 3

Scenario: Users complain that first thing in the morning they receive errors when trying to launch their application and have to re-try many times. At other times of the day, there are NO issues.

What could be causing the morning issue?

- A. A load throttling load evaluator is limiting the number of concurrent logons.
- B. A scheduling load evaluator is restricting the maximum server load at this time.
- C. A server load load evaluator is limiting the number of concurrent users in the farm.
- D. An application user load load evaluator is limiting the maximum number of users allowed to run the application.

Correct Answer: A

QUESTION 4

A Citrix XenApp administrator needs to apply a policy to all users regardless of connection type. Which type of policy should the administrator create?

- A. Unfiltered User policy
- B. Unfiltered Computer policy
- C. User policy filtered by worker group
- D. Computer policy filtered by worker group

Correct Answer: A

QUESTION 5

Scenario: A XenApp administrator has been tasked with delivering a new application to the traveling sales force. The sales force will require access to applications even when they do NOT have Internet or network access.

Which three steps are required to ensure that the sales force can access their applications at all times? (Choose three.)

- A. Install the offline plug-in on the servers.
- B. Publish the application as streamed to client.
- C. Install the offline plug-in on the sales force laptops.
- D. Install the online plug-in on the sales force laptops.
- E. Publish the application as accessed from a server, streamed to server.
- F. Publish the application as accessed from a server, installed application.

Correct Answer: BCD
