### QUESTION 1

Scenario: An administrator is in the process of profiling a streaming package. The application needs unique user updates on a regular basis.

How can the administrator minimize his workload when updating the streaming package?

- A. Enable user updates to allow users to download applications from the Internet and store them in the user's root.
- B. Enable user updates to allow users to send update requests notifications to the administrator building the packages.
- C. Enable user updates to allow users the ability to update the streaming package with changes they make themselves.
- D. Enable user updates to allow users to update the main streaming package with changes that other users can benefit from.

Correct Answer: A

---

### QUESTION 2

- A. enable image caching
- B. set the Lossy Compression Level to None
- C. set the Progressive Compression level to Low
- D. set the Heavyweight Compression level to Disabled

Correct Answer: B

---

### QUESTION 3

Which two methods can an administrator use to manually install a third-party printer driver while ensuring that only the core required driver components are present in the XenApp environment? (Choose two.)

- A. The AppCenter
- B. Print Server Properties
- C. The XenApp Server Role Manager
- D. The vendor-supplied setup.exe file
- E. The Microsoft Print Management Console

Correct Answer: BE

---

### QUESTION 4

Scenario: Users are receiving the error shown in the attached exhibit when connecting to Notepad on XenApp.

The administrator runs the QUERY FARM command on the server and receives results in the second attached exhibit.

Which configuration component is causing the high application load?

- A. An Active Directory group policy
- B. A load balancing preference policy
- C. A load evaluator applied to the server
- D. A load evaluator applied to the application

Correct Answer: D

#### QUESTION 5

Scenario: A server farm has 12 servers in the FARM worker group with more than 1,000 users and 20 published applications. Two of the published applications perform excessive CPU context switches.

What can the administrator do to ensure that the resource-intensive applications will run optimally in the server farm?

- A. Assign a load evaluator to the FARM worker group.
- B. Assign a load evaluator to both resource-intensive applications.
- C. Apply the multi-Stream policy to both resource-intensive applications.
- D. Apply the session importance policy to both resource-intensive applications.

Correct Answer: B
