QUESTION 1

The IT Director has approved the use of Apple iPad to access the corporate customer database system when the devices are connected to the local wireless network.

Which type of Web Interface site must be configured to allow iPad users to access the customer database system published on the XenApp servers?

A. XenApp Web site

B. XenApp Services site

C. XenApp Services site with dual-factor authentication only

D. XenApp Services site with pass-though authentication only

Correct Answer: B

QUESTION 2

Scenario: A XenApp administrator has been tasked with building XenApp servers as generically as possible. Other than the operating system, required updates, patches and anti-virus software, the servers are to be kept as identical as possible to allow for quick disaster recovery should the need arise. Bandwidth is restricted and the client machines run operating systems other than Windows. Therefore, streaming applications to the client machines is NOT possible.

Which setting must the administrator select when publishing the application?

A. Streamed to client

B. Accessed from a server, streamed to server

C. Accessed from a server, installed application

D. Streamed if possible, otherwise accessed from a server

Correct Answer: B

QUESTION 3

Scenario: All users are unable to launch applications from the Web Interface. They receive the following

error:

An error occurred while making the requested connection.

Which action should the administrator take next to troubleshoot the issue?

A. Restart the XenApp servers.

B. Restart the client machines.

C. Restart the Web Interface server.

D. Review the error logs on the web server.

E. Review the error logs on the client machines.

F. Review the error logs on the XenApp servers.

Correct Answer: D

QUESTION 4

Which policy should an administrator configure so that if all servers in a worker group go offline, XenApp redirects user connections to a backup worker group?

A. Citrix User

B. Load Evaluator

C. Load Balancing

D. Citrix Computer

Correct Answer: C

QUESTION 5

Scenario: Users from the Sales department have raised complaints to the company\'s CEO, arguing that launching the CRM application on a XenApp server takes a significant amount of time and is impacting their productivity. The IT Administrator has been asked to investigate the situation and find a solution to the problem. The administrator concludes that the creation of a session is being critically impacted due to profile loading and logon scripts, resulting in the one- to two-minute individual session creation times for sales users.

Which two steps could the administrator take to resolve the session issues in order to improve the user experience when connecting to the XenApp environment? (Choose two.)

A. Configure Just-in-Time Pre-launch for users in the Sales department.

B. Configure a Scheduled Pre-launch for users launching the CRM application.

C. Eliminate User profiles and disable all logon scripts for the users in the Sales department.

D. Add additional memory to the end-point computers used by the users in the Sales department to connect to the XenApp published application.

Correct Answer: AB
