QUESTION 1

XenApp users need to be able to move between client devices and reconnect to both active and disconnected sessions.

Which action must an administrator take to enable this behavior?

- A. Install Web Interface and XenApp with the default settings
- B. Disable Workspace Control on each Web Interface server
- C. Configure a XenApp policy to enable the Smooth Roaming feature
- D. Ensure that the Web Interface server is in the same domain or forest as the XenApp farm

Correct Answer: A

QUESTION 2

Scenario: Users from the Sales department have raised complaints to the company's CEO, arguing that launching the CRM application on a XenApp server takes a significant amount of time and is impacting their productivity. The IT Administrator has been asked to investigate the situation and find a solution to the problem. The administrator concludes that the creation of a session is being critically impacted due to profile loading and logon scripts, resulting in the one- to two-minute individual session creation times for sales users.

Which two steps could the administrator take to resolve the session issues in order to improve the user experience when connecting to the XenApp environment? (Choose two.)

- A. Configure Just-in-Time Pre-launch for users in the Sales department.
- B. Configure a Scheduled Pre-launch for users launching the CRM application.
- C. Eliminate User profiles and disable all logon scripts for the users in the Sales department.
- D. Add additional memory to the end-point computers used by the users in the Sales department to connect to the XenApp published application.

Correct Answer: AB

QUESTION 3

Which access method must an administrator specify if a Web Interface server is required to provide the actual IP address of a XenApp server to an Access Gateway server?

- A. Direct
- B. Alternate
- C. Translated
- D. Gateway Direct

E. Gateway Alternate

F. Gateway Translated

Correct Answer: D

QUESTION 4

In building out a new XenApp environment, an administrator places the Secure Gateway and Web Interface in the DMZ.

What must the administrator do to secure the traffic to the XML Broker?

- A. Change the XML traffic port to a non-standard assignment.
- B. Use the SSL Relay tool to encrypt traffic to the XML Broker in the farm.
- C. Place the XML Broker in the DMZ and encrypt the traffic between them.
- D. Use encrypted ICA to communicate between the XML Broker and the Web Interface.

Correct Answer: B

QUESTION 5

Scenario: A company recently upgraded all their Citrix licenses from XenApp Enterprise to XenApp Platinum. The Citrix License Server has been correctly updated and configured with the correct Citrix license files. Now users are NOT able to connect.

Which step should the administrator take to allow users to connect again?

- A. Restart the server hosting the Citrix data store.
- B. Upgrade the Delivery Services Console to the AppCenter.
- C. Update the XenApp product edition in the Computer policy.
- D. Restart all Citrix servers reporting 20,000 as their current load.

Correct Answer: C
