QUESTION 1

Which IP address type must be unique to each NetScaler in an HA pair?

- A. MIP
- B. NSIP
- C. SNIP
- D. Load balancing VIP

Correct Answer: B

QUESTION 2

A network administrator wants to ensure that connection multiplexing is enabled for all client connections that hit a virtual server. Which service type should the administrator select to enable connection multiplexing?

- A. SSL
- B. FTP
- C. TCP
- D. HTTP

Correct Answer: D

QUESTION 3

An administrator set up a NetScaler pair in HA but later noticed that the configuration changes made on the primary node were NOT synchronized with the secondary node.

Which configuration setting must be corrected for successful configuration synchronization between both nodes in HA mode?

- A. HA monitoring on interfaces is set to off.
- B. HA monitoring on the node IDs is set to off.
- C. nsroot password is not identical for both nodes.
- D. RPC node password is not identical for both nodes.

Correct Answer: D

QUESTION 4

Scenario: A financial company needs to maintain end-to-end security in network traffic. The company also requires that an administrator reduce the CPU levels for back-end servers in their environment because it requires end-to-end security.

Which setting on the SSL virtual server reduces CPU utilization on the back-end?

- A. SSLv3
- B. SSL Redirect
- C. SSL Session Reuse
- D. SSL Client Certificates

Correct Answer: C

QUESTION 5

Scenario: A network administrator working with two NetScaler systems has encountered an issue with HA. The administrator notices that HA synchronization is failing. The administrator has already run the command on both nodes but needs more information.

Which two additional steps should the administrator take to collect the appropriate data in order to troubleshoot this issue? (Choose two.)

- A. Collect the files in /var/core.
- B. Collect the files in /var/log/auth.log.
- C. Run show techsupport from both NetScalers.
- D. Run /netscaler/nstrace.sh -sz 0 to gather an nstrace.

Correct Answer: CD
