QUESTION 1

Scenario: An administrator purchased a new iSCSI Dell EqualLogic SAN. The administrator is required to configure a new storage repository on the XenServer pool and offload intensive tasks such as LUN

provisioning, snapshot and cloning of data to the new SAN.

Which type of storage repository must the administrator create to meet the requirements of this scenario?

- A. NFS VHD
- B. Hardware HBA
- C. Software iSCSI
- D. Advanced StorageLink

Correct Answer: D

QUESTION 2

Scenario: A new email virus threat has been publicly announced, but virus definitions are NOT yet available for protection. An administrator manages the virtual machine hosting the mail server of the company. There are NO redundant mail servers available and mail flow CANNOT be interrupted.

What can the administrator do as a preventive tactic?

- A. Preserve the virtual machine by exporting it to an external drive.
- B. Enable high availability to ensure the virtual machine remains online.
- C. Make a copy of the virtual machine in case the original gets infected.
- D. Perform an online backup by taking a snapshot of the virtual machine.

Correct Answer: D

QUESTION 3

An administrator notices that the target device is NOT starting from a newly created vDisk, but other target devices using different vDisks are working.

Which action can the administrator take to correct this issue?

- A. Restart the Stream Service.
- B. Enable streaming on the vDisk.
- C. Reset the Active Directory machine account password.
- D. Change the vDisk access mode to Private Image mode.

Correct Answer: B

QUESTION 4

Scenario: An administrator needs to configure a shared storage repository for a XenServer pool. The storage team has provisioned 500 GB of storage space on a NetApp SAN to be used for the XenServer storage repository. Thin provisioning and data deduplication were defined as requirements for the storage repository and must be enabled using XenCenter.

Which type of storage repository will allow the administrator to meet the specified requirements?

- A. NFS VHD
- B. Hardware HBA
- C. Software iSCSI
- D. Advanced StorageLink

Correct Answer: D

QUESTION 5

Scenario: An administrator is creating a vDisk image of a physical Windows server using XenConvert. This vDisk is going to be used by multiple target devices in Standard Image mode.

Which two steps does the administrator need to take to prepare the Windows server for physical- to-virtual conversion? (Choose two.)

- A. Disable Windows Autoplay.
- B. Enable Windows Automount.
- C. Put the server in Standby mode.
- D. Format the hard disk drive of the server.

Correct Answer: AB
