QUESTION 1

Scenario: An administrator needs to add two new XenServer hosts to an existing pool. Before adding a host to the pool, the administrator created a network bond on the pool master.

Which CLI command must the administrator run to replicate the bond on the new hosts?

- A. xe pool-join
- B. xe bond-create
- C. xe network-create
- D. xe pool-param-set

Correct Answer: A

QUESTION 2

Scenario: An administrator is moving a XenServer host from the New York datacenter to the London datacenter. During the installation of XenServer, the default NTP settings were selected.

How must the administrator ensure that the XenServer host has the correct time settings?

- A. Configure the time in the host BIOS.
- B. Configure the time zone in the ntp.conf file.
- C. Change the time zone using the xsconsole.
- D. Change the NTP servers to the London NTP servers.

Correct Answer: C

QUESTION 3

Scenario: A new email virus threat has been publicly announced, but virus definitions are NOT yet available for protection. An administrator manages the virtual machine hosting the mail server of the company. There are NO redundant mail servers available and mail flow CANNOT be interrupted.

What can the administrator do as a preventive tactic?

- A. Preserve the virtual machine by exporting it to an external drive.
- B. Enable high availability to ensure the virtual machine remains online.
- C. Make a copy of the virtual machine in case the original gets infected.
- D. Perform an online backup by taking a snapshot of the virtual machine.

Correct Answer: D

QUESTION 4

An administrator of a Provisioning services environment notices that several of the target devices that are configured to use a vDisk on the provisioning server are randomly failing to start and shut down.

What should the administrator check to prevent this issue from occurring?

- A. The SOAP Service is running.
- B. High availability is enabled on the vDisks.
- C. The target devices are configured to start up from hard disk.
- D. All network switch ports have spanning tree protocol disabled.

Correct Answer: D

QUESTION 5

Scenario: An administrator needs to install Windows Server 2008 R2 on a new virtual machine. The Windows Server 2008 R2 ISO file is located on a Windows share.

Which storage repository does the administrator need to create to be able to mount the ISO file to the new virtual machine?

- A. CIFS
- B. iSCSI
- C. NFS ISO
- D. StorageLink

Correct Answer: A
