### QUESTION 1

Which action must an administrator take to configure unattended backups of virtual machine configurations?

- A. Schedule virtual machine metadata.
- B. Schedule a virtual machine snapshot.
- C. Configure virtual machine protection policies.
- D. Configure a script for exporting virtual machines.

Correct Answer: A

---

### QUESTION 2

Scenario: The SAN Administrator provided an NFS share for the XenServer Administrator to use. The share name is NfsLun01 and is located at 192.168.0.53.

Which format must the administrator use to connect to the share?

- A. 192.168.0.53:/NfsLun01
- B. \\192.168.0.53\\NfsLun01
- C. 192.168.0.53:3260\\NfsLun01
- D. http://192.168.0.53/NfsLun01

Correct Answer: A

---

### QUESTION 3

Scenario: An administrator is in charge of distributing streamed Windows desktops to users using Provisioning services. Users have reported that they CANNOT access any printers while using the streamed desktops. The administrator has confirmed local printers are installed in the base image.

What could be causing this issue?

- A. Printer drivers are NOT configured.
- B. Network printers are NOT assigned to the users.
- C. Active Directory printers are assigned to the users.
- D. Printer Management is enabled in the vDisk properties.

Correct Answer: D

---

#### QUESTION 4

Which two DHCP options must an administrator configure for a target device to start up without PXE using a bootstrap file? (Choose two.)

- A. 64
- B. 65
- C. 66
- D. 67

Correct Answer: CD

---

#### QUESTION 5

An administrator needs to add a new group of similar computers to an existing Provisioning services farm. Which type of resource could the administrator create in Provisioning services?

- A. Farm
- B. Store
- C. Target Device
- D. Device Collection

Correct Answer: D
