QUESTION 1

Scenario: An administrator of a XenServer resource pool is running multiple XenDesktop virtual machines. To reduce the amount of network traffic between the host and network storage, the administrator enabled IntelliCache.

Which type of storage repository must the administrator use in this scenario?

- A. HBA
- B. LVM
- C. EXT3
- D. iSCSI

Correct Answer: C

QUESTION 2

Scenario: An administrator needs to ensure that all virtual machine traffic transmits over a specified VLAN. The XenServer host has two network interface cards, one for management and the other for virtual machine traffic.

Which network type must the administrator create on a XenServer host to allow access to the specified VLAN?

- A. Bonded
- B. External
- C. Cross-server private
- D. Single-server private

Correct Answer: B

QUESTION 3

Scenario: An administrator is installing Provisioning services which uses PXE for starting virtual machines. DHCP is installed and configured in the environment.

What additional component is required for the PXE environment to start a virtual machine?

- A. TFTP
- B. BootP
- C. SOAP Service
- D. Boot Device Manager

Correct Answer: A

QUESTION 4

An administrator needs to export a virtual machine to an NFS share mounted on a XenServer host.

Which xe CLI command does the administrator need to execute from a remote machine to perform the virtual machine export?

- A. `xe vm-export -h filename=`
- B. `xe vm-export -h -u -pw vm=`
- C. `xe vm-export -h -u -pw filename=`
- D. `xe vm-export -h -u -pw vm= filename=`

Correct Answer: D

QUESTION 5

An administrator needs to authenticate all users when they log into the XenServer pool using their Windows credentials.

What is the first step the administrator must take to achieve this?

- A. Join the XenServer pool to the domain.
- B. Add each user to the Users tab in XenCenter.
- C. Create a XenServer user group within Active Directory.
- D. Create Active Directory accounts for the XenServer users.

Correct Answer: A
