-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Scenario: A network engineer has configured GSLB for a multisite environment. All GSLB services show as UP with an UP MEP status.

The engineer has observed that DNS queries are directed to the SNIP of the NetScaler; however, no DNS response is being received. How can the engineer resolve this issue?

- A. Add an ADNS service on the SNIP.
- B. Change the DNS delegation to the NSIP.
- C. Create a load balancing virtual server for DNS.
- D. Select the "Send all "active" service IPs\\' in response (MIR)" option.

Correct Answer: A

QUESTION 2

Scenario: A user browses to a page and is presented with a warning that he is trying to enter a web site with an untrusted certificate. The network engineer had added the correct certificate to the SSL virtual server.

What could be the cause of this issue?

- A. TLS is disabled on the virtual server.
- B. The certificate is not linked to the intermediate CA.
- C. The certificate has expired and needs to be renewed.
- D. The CA certificate has not been added to the SSL virtual server.

Correct Answer: B

QUESTION 3

Scenario: A NetScaler engineer has received an SSL certificate and bound it to the vServer. However, users are unable to browse to the website using HTTPS. When the NetScaler engineer browses to the site using HTTPS, the engineer notices that the certificate chain is incomplete. Which two steps should the administrator take to fix the virtual server? (Choose two.)

- A. Generate a new CSR.
- B. Install a new Certificate Authority (CA).
- C. Install the Intermediate Certificate from the CA.
- D. Link the Intermediate Certificate to the virtual server.
- E. Link the SSL Certificate to the Intermediate Certificate.

Correct Answer: CE

QUESTION 4

Scenario: A network engineer has modified the configuration of a content-switching virtual server, Website_main, because a second content-switching server that is capable of handling more connections has been added to the NetScaler

implementation. Both servers will remain in operation.

The engineer made the following configuration changes:

```
>set cs vserver Website_main -lbvserver New_Server -backupVserver Old_Server -redirectURL http://www.mydomain.com/maintenance -soMethod Connection -soThreshold 1000
```

Why did the engineer enable the spillover option?

- A. To handle incoming connections in case the new server is unavailable
- B. To handle the extra connections using the old server without dropping them
- C. To redirect the extra connections to the Maintenance website when it is needed
- D. To handle incoming connections while the server reaches its limit of connections

Correct Answer: B

QUESTION 5

Scenario: The NetScaler has been connected to two external networks provided by different Internet service providers(ISPs). Dynamic routing is not enabled. Traffic is expected to use the first ISP (through the 10.50.1.1 router) if possible and the second, slower ISP (through the 10.51.1.1 router) only if the Primary ISP fails.

Which two commands could the network engineer execute to configure the routes? (Choose two.)

- A. add route 0.0.0.0 0.0.0.0 10.51.1.1 -cost 10 -monitor arp
- B. add route 0.0.0.0 0.0.0.0 10.50.1.1 -cost 5 -monitor PING
- C. add route 0.0.0.0 0.0.0.0 10.50.1.1 -cost 15 -msr ENABLED
- D. add route 0.0.0.0 0.0.0.0 10.51.1.1 -cost 3 -monitor PING-DEFAULT

Correct Answer: AB
