QUESTION 1

ENCRYPT_TS is an encrypted tablespace that contains tables with data.

Which statement is true regarding the effect of queries and data manipulation language (DML) statements on the encrypted data in the tables?

- A. The data is decrypted during SORT and JOIN operations.
- B. The data remains encrypted when it is read into memory.
- C. The data remains encrypted when it is stored in the redo logs.
- D. The data remains encrypted in the UNDO tablespace provided that the UNDO tablespace was created with the encryption option enabled.

Correct Answer: C

QUESTION 2

Examine the following RMAN command:

```
RMAN> CONFIGURE ENCRYPTION FOR DATABASE ON; RMAN> BACKUP DATABASE PLUS  
ARCHIVELOG;
```

Which prerequisite must be met before accomplishing the backup?

- A. Provide a password for the encryption.
- B. Set up an Oracle wallet for the encryption.
- C. No setup is required as it is a default encryption method.
- D. Both Oracle wallet and password must be set up for the encryption.

Correct Answer: B

QUESTION 3

To accomplish user-managed backup for the USERS tablespace, you issued the following command to put the tablespace in backup mode:

```
SQL> ALTER TABLESPACE users BEGIN BACKUP;
```

While copying the file to the backup destination a power outage caused the instance to terminate abnormally.

Which statement is true about the next database startup and the userstablespace?

- A. The database will open, and the tablespace automatically comes out of the backup mode.
- B. The database will be mounted, and recovery must be performed on the USERS tablespace.
- C. The database will be mounted, and data files in the USERS tablespace must be taken out of the backup mode.
- D. The database will not be mounted, and you must restore all the data files for the USERS tablespace from the backup, and perform recovery.

Correct Answer: C

QUESTION 4

The instance abnormally terminates because of a power outage. Which statement is true about redo log files during instance recovery?

- A. Inactive and current redo log files are required to accomplish recovery
- B. Online and archived redo files are required to accomplish instance recovery
- C. All redo log entries after the last checkpoint are applied from redo log files to data files
- D. All redo log entries recorded in the current log file until the checkpoint position are applied to data files

Correct Answer: C

QUESTION 5

The DB_BLOCK_CHECKING parameter is set to FALSE.

What level of block checking will be performed?

- A. The Oracle database will not perform block checking for any of the data blocks.
- B. The Oracle database will perform block checking for the default permanent tablespace only.
- C. The Oracle database will perform block checking for the data blocks in all user tablespaces.
- D. The Oracle database will perform block checking for the data blocks in the SYSTEM tablespace only.
- E. The Oracle database will perform block checking for the data blocks in the SYSTEM and SYSAUX tablespaces.

Correct Answer: D
