CUST_ID	NOT NULL	NUMBER
CUST_FIRST_NAME	NOT NULL	VARCHAR2 (20)
CUST_LAST_NAME	NOT NULL	VARCHAR2 (40)
CUST_GENDER	NOT NULL	CHAR (1)
CUST_YEAR_OF_BIRTH	NOT NULL	NUMBER (4)

        quantity_sold,cust_last_name
FROM products p NATURAL JOIN sales s NATURAL JOIN customers
WHERE prod_id =148;
```

Which statement is true regarding the outcome of this query?

- A. It produces an error because the NATURAL join can be used only with two tables
- B. It produces an error because a column used in the NATURAL join cannot have a qualifier
- C. It produces an error because all columns used in the NATURAL join should have a qualifier
- D. It executes successfully

Correct Answer: B

Creating Joins with the USING Clause Natural joins use all columns with matching names and data types to join the tables. The USING clause can be used to specify only those columns that should be used for an equijoin. The Natural JOIN USING Clause The format of the syntax for the natural JOIN USING clause is as follows: SELECT table1.column, table2.column FROM table1 JOIN table2 USING (join_column1, join_column2...);

While the pure natural join contains the NATURAL keyword in its syntax, the JOIN...USING syntax does not.

An error is raised if the keywords NATURAL and USING occur in the same join clause. The JOIN...USING clause allows one or more equijoin columns to be explicitly specified in brackets after the USING keyword. This avoids the

shortcomings associated with the pure natural join. Many situations demand that tables be joined only on certain columns, and this format caters to this requirement.

QUESTION 5

Which two statements are true regarding savepoints? (Choose two.)

- A. Savepoints are effective only for COMMIT.
- B. Savepoints may be used to ROLLBACK.
- C. Savepoints can be used for only DML statements.
- D. Savepoints are effective for both COMMIT and ROLLBACK.
- E. Savepoints can be used for both DML and DDL statements.
