QUESTION 1

Which two tasks must you perform before you begin the upgrade process to Oracle Database 12c? (Choose two.)

- A. Put all readonly tablespaces in read write mode
- B. Recompile all invalid objects
- C. Set the compatible parameter to 12.1.0.1
- D. Gather dictionary statistics
- E. Empty all user recycle bins

Correct Answer: BE

QUESTION 2

In which two scenarios do you use SQL* Loader to load data? (Choose two.)

- A. Transform the data while it is being loaded into the database.
- B. Use transparent parallel processing without having to split the external data first.
- C. Load data into multiple tables during the same load statement.
- D. Generate unique sequential key values in specified columns.

Correct Answer: CD

QUESTION 3

You want to create a file watcher and an event-based job for detecting the arrival of files on the local server from various locations. To achieve this, you enable the raising of file arrival events from remote systems.

Which two conditions must be satisfied to receive file arrival events from a remote system? (Choose two.)

- A. The remote system must have a running Oracle Database instance and a scheduler agent installed.
- B. The initialization parameter REMOTE_OS_AUTHENT must be set to TRUE on your database.
- C. The local database must be set up to run remote external jobs.
- D. The remote system's scheduler agent must be registered with your database.
- E. Database links to remote databases must be created.

Correct Answer: AC

QUESTION 4

Your database is open and the listener LISTENER is up. You issue the command:

```
LSNRCTL> RELOAD
```

What is the effect of reload on sessions that were originally established by listener?

- A. Only sessions based on static listener registrations are disconnected.
- B. Existing connections are not disconnected; however, they cannot perform any operations until the listener completes the re-registration of the database instance and service handlers.
- C. The sessions are not affected and continue to function normally.
- D. All the sessions are terminated and active transactions are rolled back.

Correct Answer: C

QUESTION 5

In your multitenant container database (CDB) containing pluggable database (PDBs), the HR user executes the following commands to create and grant privileges on a procedure:

```
CREATE OR REPLACE PROCEDURE create_test_v (v_emp_id NUMBER, v_ename VARCHAR2,  
v_SALARY NUMBER, v_dept_id NUMBER)  
BEGIN  
INSERT INTO hr.test VALUES (V_emp_id, V_ename, V_salary, V_dept_id);  
END;  
/  
GRANT EXECUTE ON CREATE_TEST TO john, jim, smith, king;
```

How can you prevent users having the EXECUTE privilege on the CREATE_TEST procedure from inserting values into tables on which they do not have any privileges?

- A. Create the CREATE_TEST procedure with definer's rights.
- B. Grant the EXECUTE privilege to users with GRANT OPTION on the CREATE_TEST procedure.
- C. Create the CREATE_TEST procedure with invoker's rights.
- D. Create the CREATE_TEST procedure as part of a package and grant users the EXECUTE privilege the package.

Correct Answer: C

If a program unit does not need to be executed with the escalated privileges of the definer, you should

specify that the program unit executes with the privileges of the caller, also known as the invoker. Invoker's rights can mitigate the risk of SQL injection.

Incorrect:

Not A: By default, stored procedures and SQL methods execute with the privileges of their owner, not their current user. Such definer-rights subprograms are bound to the schema in which they reside.

not B: Using the GRANT option, a user can grant an Object privilege to another user or to PUBLIC.
