-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

One of your database suffered an instance failure.

At the next startup, from which point in the redo logs does instance recovery begin?

- A. from a point corresponding to the most recent successful transaction commit
- B. from a point corresponding to the most recent log instance checkpoint
- C. from a point corresponding to the most recent incremental checkpoint
- D. from a point corresponding to the most recent checkpoint of any kind
- E. from a point corresponding to the most recent log switch checkpoint

Correct Answer: A

---

### QUESTION 2

Which three statements are true about compression of backup sets? (Choose three.)

- A. Compressed backups can only be written to media.
- B. Binary compression creates performance overhead during a backup operation.
- C. Unused blocks below the high-water mark are not backed up.
- D. Compressed backups cannot have section size defined during a backup operation
- E. It works only for locally managed tablespaces.

Correct Answer: BCE

---

### QUESTION 3

Which three statements are true about unplugging a pluggable database (PDB)? (Choose three.)

- A. The PDB must be open in read only mode.
- B. The PDB must be closed.
- C. The unplugged PDB becomes a non-CDB.
- D. The unplugged PDB can be plugged into the same multitenant container database (CDB)
- E. The unplugged PDB can be plugged into another CDB.
- F. The PDB data files are automatically removed from disk.

Correct Answer: BDE

B (not A): The PDB must be closed before unplugging it.

D: An unplugged PDB contains data dictionary tables, and some of the columns in these encode information in an endianness-sensitive way. There is no supported way to handle the conversion of such columns automatically. This means, quite simply, that an unplugged PDB cannot be moved across an endianness difference. E (not F): To exploit the new unplug/plug paradigm for patching the Oracle version most effectively, the source and destination CDBs should share a filesystem so that the PDB's datafiles can remain in place. Reference: Oracle White Paper, Oracle Multitenant

#### QUESTION 4

You plan to create a new PDB by copying PDB\$SEED.

Which two requirements ensure a successful creation? (Choose two.)

- A. The CDB must have PDB\_FILE\_NAME\_CONVERT configured before executing the command.
- B. A default service for the new PDB name must already exist.
- C. A PDB local administrative user must be granted the DBA role when creating the PDB.
- D. A PDB local administrative user must be specified when creating the PDB.
- E. The CDB, which will contain the PDB, must be in READ WRITE mode.
- F. The CDB must use Oracle Managed Files.

Correct Answer: CE

#### QUESTION 5

Examine this command:

```
SQL> CREATE PLUGGABLE DATABASE pdb2 FROM pdb1
      FILE_NAME_CONVERT = ('/disk1/oracle/pdb1/', '/disk2/oracle/pdb2/')
      PATH_PREFIX = '/disk2/oracle/pdb2';
```

Which two statements are true after successful execution? (Choose two.)

- A. PDB2 will be open read-only.
- B. PDB2 will be in MOUNT state.
- C. A metadata description of PDB2 is stored in an XML file in '/disk2/oracle/pdb2/\\'.
- D. A metadata description of PDB2 is stored in the system tablespace of PDB1.
- E. PDB2 will use shared UNDO.

Correct Answer: BD
