QUESTION 1

Which three are true about disabling of the Data Guard Broker management of databases in a configuration and the effects of doing this? (Choose three.)

- A. The configuration transport mode may be modified while the entire configuration is disabled from broker management.
- B. Database properties may be modified when that database is disabled from broker management.
- C. A standby database that is the fast start failover target, may be disabled from broker management only by using the disable database DGMGRL command.
- D. The only way to disable broker management of the primary database is to use the disable configuration DGMGRL command.
- E. The only way to disable broker management of a far sync instance is to use the disable configuration DGMGRL command.

Correct Answer: BCD

QUESTION 2

Which three are always benefits of using a logical standby database?

- A. it can be used for database rolling release upgrades
- B. it can be used to replicate a single pluggable database (PDB) in a multitenant container database.
- C. It can be used as an updatable database for Real Application testing and then converted back to a standby database without affecting the updates.
- D. It can be used for reporting workloads requiring additional indexes or materialized views or both.
- E. It provides a disaster-recovery solution with switchover and failover options that can recover any data updated on the primary database.
- F. it can be used for testing patches without affecting the primary database.

Correct Answer: CDF

QUESTION 3

Which two statements are true for Data Guard environments with multi-tenant databases?

- A. Different pluggable databases within a logical standby database may have different guard statuses.
- B. The Data Guard broker automatically always opens the pluggable databases of a standby database after a role change operation.

- C. The Data Guard broker automatically opens all pluggable databases of a primary database a role change operation.
- D. The CDBDBA privilege must be used instead of the SYSDBA privilege for connections as SYS to the root container of a multi-tenant standby database.
- E. A multi-tenant standby database can have fewer pluggable databases than the primary container database

Correct Answer: CD

QUESTION 4

Examine the Data Guard configuration:

```
DGMGRL > show configuration;
```

```
Configuration - Animals
Protection Mode: MaxAvailability
Databases:
cats- Primary database
dogs-Physical standby database
sheep-Logical standby database
```

```
Fast-Start Failover: DISABLED
```

```
Configuration Status:
SUCCESS
```

Which three will be true after a switchover to Dogs?

- A. Sheep will be an enabled logical standby database.
- B. Cats will be an enabled physical standby database
- C. Dogs will be the primary database D. Sheep will be a disabled logical standby database
- E. Cats will be a disabled physical standby database

Correct Answer: BCE

QUESTION 5

Attempting to start the observer raises an error:

```
DGMGRL> start observer;
```

```
DGM-16954: Unable to open and lock the Observer configuration file Failed.
```

Identify two possible reasons for this error

- A. Fast-Start Failover is not yet enabled for this Data Guard configuration
- B. The observer configuration file is marked read-only.
- C. There is already an observer running for this Data Guard configuration.
- D. There is another observer running for a Data Guard configuration which uses the same observer configuration file
- E. The broker configuration has not yet been created.

Correct Answer: BD
