QUESTION 1

Which three instance situations are possible with the Oracle Database server without multi-tenant? (Choose three.)

- A. two or more instances on separate servers all associated with one database
- B. one instance on one server associated with one database
- C. one instance on one server associated with two or more databases on the same server
- D. one instance on one server not associated with any database
- E. one instance on one server associated with two or more databases on separate servers

Correct Answer: ABD

A: RAC 2,3 or 4 nodes

B: Single instance (standalone) with database

C: one instance running multiple INDEPENDENT databases!!

D: Single instance (standalone) without database

E: absurd configuration!

QUESTION 2

Examine these commands: Which two statements are true about the sqlldr execution? (Choose two.)

```
[oracle@host01 ~]$ sqlplus u1/oracle
SQL> SELECT * FROM emp;
ENO          ENAME          DN
-----
1            Alan           2
2            Ben            2

SQL> exit
[oracle@host01 ~]$ cat emp.dat

3,Curl,4
4,Bob,4

[oracle@host01 ~]$ sqlldr u1/oracle TABLE=emp
```

- A. It overwrites data in EMP with data in EMP.DAT
- B. It uses the database buffer cache to load data
- C. It generates a log that contains control file entries, which can be used with normal SQL*Loader operations
- D. It generates a sql script that it uses to load data from EMP.DAT to EMP
- E. It appends data from EMP.DAT to EMP

Correct Answer: CE

C and E are correct - ..."SQL*Loader express mode generates a log file that includes a SQL*Loader control file. The log file also contains SQL scripts for creating the external table and performing the load using a SQL INSERT AS SELECT statement. Neither the control file nor the SQL scripts are used by SQL*Loader express mode. They are made available to you in case you want to use them as a starting point to perform operations using regular SQL*Loader or standalone external tables; the control file is for use with SQL*Loader, whereas the SQL scripts are for use with standalone external tables operations."

QUESTION 3

Which two statements are true about Enterprise Manager Database Express? (Choose two.)

- A. It is available only when the database is open
- B. It can be used to perform database recovery
- C. The same port number can be used for Database Express configurations for databases on different hosts
- D. It can be used to switch a database into ARCHIVELOGMODE
- E. The same port number can be used for multiple Database Express configurations for multiple databases on the same host

Correct Answer: AC

A - Correct -> to startup the enterprise manager database express, the database have to be in open state B - Incorrect -> to perform a full recovery, the database has to be in mount state, and EM express not work if database is not in open state C - Correct -> since they are in different hosts, you can use the same port for then (default 5500) D - Incorrect -> to switch a database to ARCHIVELOGMODE the database need to be in mount state (like B answer) E - Incorrect -> the same port cannot be used in the same time for different services in the same host (here a basic of tcp/ip protocol) If need more reference: EM Express (Chapter 3.3) <https://docs.oracle.com/en/database/oracle/oracle-database/19/admq5/2-day-dba.pdf>

ARCHIVELOGMODE (Chapter 12.3.2) <https://docs.oracle.com/en/database/oracle/oracle-database/19/admin/database-administrators-guide.pdf>

QUESTION 4

Which three statements are true about Oracle synonyms? (Choose three.)

- A. A synonym cannot be created for a PL/SQL package

- B. A synonym can be available to all users
- C. A SEQUENCE can have a synonym
- D. A synonym created by one user can refer to an object belonging to another user
- E. Any user can drop a PUBLIC synonym

Correct Answer: BCD

Reference: https://docs.oracle.com/cd/B19306_01/server.102/b14200/statements_7001.htm

QUESTION 5

In the spfile of a single instance database, LOCAL_LISTENER is set to LISTENER_1.

The TNSNAMES.ORA file in \$ORACLE_HOME/network/admin in the database home contains:

```
LISTENER_1 =  
  (ADDRESS =  
    (PROTOCOL = TCP)  
    (HOST = host1.abc.com)  
    (PORT = 1521)  
  )
```

Which statement is true?

- A. Dynamic service registration cannot be used for this database instance
- B. The LREG process registers services dynamically with the LISTENER_1 listener
- C. LISTENER_1 must also be defined in the LISTENER.ORA file to enable dynamic service registration
- D. There are two listeners named LISTENER and LISTENER_1 running simultaneously using port 1521 on the same host as the database instances
- E. The definition for LISTENER_1 requires a CONNECT_DATA section to enable dynamic service registration

Correct Answer: B

The listener forwards client requests to supported services. These services are dynamically registered with the listener. This dynamic registration feature is called service registration. The registration is performed by the Listener Registration (LREG) process. Dynamic service registration does not require any manual configuration in the listener.ora file.
