QUESTION 1

What are the two types of analytics processors in Oracle Internet of Things (IoT) Cloud Service?

- A. Batch Analytics Processors
- B. Natural Analytics Processors
- C. Static Analytics Processors
- D. streaming Analytics Processors

Correct Answer: AD

Explanation: <https://docs.oracle.com/en/cloud/paas/iot-cloud/iotgs/understanding-analytics-processors.html> The type of analytics processor to use depends on the nature of your data: Streaming Analytics Processors Use streaming analytics processors to analyze high volumes of rapidly changing data streamed from your sensors and devices. Streaming analytics processors are continuously running from the moment you deploy them, waiting for your devices to stream data. See Creating Streaming Analytics Processors. Batch Analytics Processors Use batch analytics processors to analyze large volumes of batch data. Typically, batch analytics processors process data stored in the Oracle NoSQL or other data sources. Unlike streaming analytics processors they are not continuously running, they only run when you call them using the REST API they expose.

QUESTION 2

Which three statements are true about business and data objects in OIC PROCESS?

- A. Data objects can be created based on a business object
- B. Enum objects are a special type of business object
- C. Business objects can be created from an XML schema or from JSON.
- D. Business objects can be created based on a data object
- E. Business objects cannot contain other business objects
- F. Business exceptions can use only the string data type.
- G. Business and data objects are auto-generated when creating web forms.

Correct Answer: ABC

<https://docs.oracle.com/en/cloud/paas/integration-cloud/user-processes/define-data.html#GUID-ED75D7B0-B60B-4107-9F86-6C63AAEB1A62>

QUESTION 3

Which Service-Oriented Architecture Cloud Service (SOA CS) component provides stateful orchestration?

- A. Oracle Mediator

B. Oracle Business Activity Monitoring

C. Oracle Service Bus

D. Oracle Business Rules

E. OracleBPEL Process Manager

Correct Answer: E

Reference: <http://www.oracle.com/us/products/middleware/soa/oracle-soa-suite-ds-066430.pdf>

QUESTION 4

Which setting is used for a system that is hosting a web application to be allowed to access Oracle Internet of Things (IoT) Cloud Service resources?

A. Cross-Origin Resource Sharing (CORS)

B. Management Console Timeout Interval

C. Message Storage and Command Notification

D. OAuth Access Token Lifetime

Correct Answer: A

Explanation: The cross origin resource sharing setting specifies if the system that is hosting a web application is allowed to access Oracle IoT Cloud Service resources. The assumption is that the web application is running in a browser that is also implementing the CORS specification. Any browser based JavaScript client running on the specified host can access Oracle IoT REST APIs. However they will need to follow the Oracle IoT REST API authorization process to run any operations. <https://docs.oracle.com/en/cloud/paas/iot-cloud/iotsu/setting-cross-origin-resource-sharing-value.html>

QUESTION 5

Which two actions can be repositioned in integration with Oracle Integration Cloud (OIC)?

A. Function Call

B. Switch

C. Stage File with Read File in Segments

D. Stage File

Correct Answer: AB
