QUESTION 1

What is the output of this code?

```
8 context:
9   variables:
10    messages: "string"
11 states:
12   setMessage:
13    component: "System.SetVariable"
14   properties:
15    variable: "messages"
16    value:
17     - "One."
18     - "Two."
19     - "Three."
20   printMessages:
21    component: "System.Output"
22   properties:
23    text: |-
24        <#list messages.value as text>${text}
25
26        </#list>
27   transitions:
28    return: "done"
```

- A. The code will run into an infinite loop.
- B. Only first value - "One" will be printed.
- C. The code will fail to validate because |- is not a valid symbol.
- D. All the three values - "One." "Two." and "Three." will be printed.

Correct Answer: B

QUESTION 2

Which two statements about skills are true?

- A. Customers can only chat with skill when those skills managed by a digital assistant.
- B. Skills can access back-end services.
- C. Skills have dialog flows that you may configure to create conversation.
- D. Skills always use natural languages processing (NLP).

Correct Answer: AB

QUESTION 3

Which three statements are FALSE regarding entity resolution using a composite bag?

- A. You can define multiple prompts for each entity item in the composite bag.
- B. The composite bag will automatically resolve any entity values found in the initial user input.
- C. When a user inputs entity values, they can only be resolved in the order in which they are defined within the composite bag.
- D. Each entity item in the composite bag can have only one value.
- E. Every entity item in the composite bag must be prompted for and have a value entered.
- F. You can define validation code using Apache Freemarker for entity item values.

Correct Answer: ACE

QUESTION 4

Error handlers can be defined in various locations with different scopes. Which three statements are true about error handling?

- A. An error handler can be defined as a transition on any dialog flow state in a skill.
- B. The system error handler is called in case of an error when no error handling is defined on the current dialog flow state or as a default transition.
- C. You can define a system-wide custom error handler at the digital assistant level.
- D. Implicit error handling is always performed even if there are other error handlers defined in the flow.
- E. An error handler can be defined globally for a skill using the defaultTransition error transition.

Correct Answer: BCD

QUESTION 5

What statement correctly describes the Authentication Service on Oracle Digital Assistant?

- A. The Authentication Service authenticates users to Oracle Identity Cloud Service. It provides customizable login screens that are displayed in the context of a user-bot conversation.
- B. The Authentication Service holds the identity provider configuration that is used at run time in Oracle Digital Assistant to retrieve an access token that authorizes REST service calls.
- C. The Authentication Service authenticates Oracle Digital Assistant users to a social media identity provider (for example, Facebook) and associates social media accounts with accounts stored in the Oracle Identity Cloud Service.

D. The Authentication Service allows bot designers to configure a custom webhook to authenticate and authorize users using the System.OauthAccountLink component.

Correct Answer: D
