QUESTION 1

You had an outage in your application caused by the loss of a shared volume provisioned by File Storage Service (FSS). At this point, you need to restore the data from a snapshot you created of the FSS. What are the steps to restore the data?

- A. Access the directory where the shared volume is mounted, then cd into .snapshot folder, find the snapshot folder you want to recover and use cp or rsync tool to copy the files to the original location.
- B. Open OCI Console, select File Storage Service, find the shared storage, then click on snapshot and restore.
- C. Open OCI Console, select File Storage Service, find the snapshot you created and click restore.
- D. Access the directory, where you mounted the shared volume, then cd into .snapshot folder and find the snapshot folder you want to recover and rename that folder to the original folder name.

Correct Answer: B

QUESTION 2

Which two configuration formats does Terraform support? (Choose two.)

- A. YAML
- B. JSON
- C. HCL
- D. XML

Correct Answer: BC

References:

Terraform configuration files can use either of two formats: Terraform domain-specific language (HashiCorp Configuration Language format [HCL]), which is the recommended approach, or JSON format if the files need to be machine-readable.

QUESTION 3

What is a "transfer package" when transferring data to OCI via the OCI Data Transfer Service?

- A. A transfer package is the logical representation of the physical shipment containing the HDD transfer devices that you ship to Oracle to upload to OCI.
- B. A transfer package is the software Oracle provides for you to prepare transfer devices for shipment to Oracle
- C. A transfer package contains the physical devices.
- D. A transfer package is the archive file that the Data Transfer Service Utility (dts) writes to the transfer device.

Correct Answer: A

QUESTION 4

When terminating a compute instance, which statement is true?

- A. The instance needs to be stopped first, and then terminated.
- B. The boot volume is always deleted.
- C. All block volumes attached to the instance are terminated.
- D. Users can preserve the boot volume associated with the instance.

Correct Answer: D

You can permanently terminate (delete) instances that you no longer need. Any attached VNICs and volumes are automatically detached when the instance terminates. Eventually, the instance's public and private IP addresses are released and become available for other instances. By default, the instance's boot volume is deleted when you terminate the instance, however you can preserve the boot volume associated with the instance, so that you can attach it to a different instance as a data volume, or use it to launch a new instance.

QUESTION 5

Which deployment architecture is offered when you deploy the Platform Service Manager based Database Cloud Service (DBCS) onto Oracle Cloud Infrastructure?

- A. Two node Primary RAC database leveraging ACFS for the shared file system
- B. Single Instance database with a Single Instance Data Guard in Maximum Performance mode
- C. Single Instance database with a Single Instance Data Guard in Maximum Protection mode
- D. Two node Primary RAC database with a two node RAC Data Guard Standby in Maximum Performance mode

Correct Answer: D
