-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

You have successfully configured identity federation between Oracle Cloud Infrastructure (OCI) and Oracle Identity Cloud Services (IDCS). A new project manager wants access to OCI for her team and provides the name of an existing group within IDCS to use when granting access.

How do you configure federation to allow the project team access to OCI resources?

- A. Create a new IAM group in OCI and map it to the existing IDCS group. Create a new policy in IDCS and reference the name of the IAM group.
- B. Create a new Identity and Access Management (IAM) policy in OCI and reference the name of the IDCS group in each policy statement.
- C. Create a new compartment in OCI with the same name as the existing IDCS group. Create an IAM policy that references the new compartment and the name of the IDCS group.
- D. Create a new IAM group in OCI and map it to the existing IDCS group. Create a new IAM policy and reference the name of the IAM group in each policy statement.

Correct Answer: D

QUESTION 2

Which scaling option does Database Cloud Service (DBCS) on Bare Metal Shape offer?

- A. network bandwidth
- B. CPU
- C. storage
- D. memory

Correct Answer: B

References: <https://docs.cloud.oracle.com/iaas/Content/Database/Tasks/managingDBsystem.htm>

QUESTION 3

What is true about data guard set up with fast-start failover (FSFO) in Oracle Cloud Infrastructure (OCI)?

- A. The best practice for high availability and durability is to run the primary, standby, and observer in separate availability domains (ADs).
- B. When you configure data guard using OCI console, the default mode is set to maxprotection.
- C. You cannot create the standby DB system in a different AD from the primary DB system.

D. You cannot use database command line interface (CLI) to set up data guard with FSFO.

Correct Answer: A

References:

The best practice for high availability and durability is to run the primary, standby, and observer in separate availability domains. The observer determines whether or not to failover to a specific target standby database

<https://docs.cloud.oracle.com/en-us/iaas/Content/Database/Tasks/usingDG.htm#ConfiguringObserverOptional>

QUESTION 4

Which two Oracle Cloud Infrastructure database services allow you to dynamically both scale CPU and storage?
(Choose two.)

- A. bare metal DB system
- B. virtual machine DB system
- C. Autonomous Data Warehouse (ADW)
- D. Autonomous Transaction Processing (ATP)

Correct Answer: CD

If a bare metal DB system requires more compute node processing power, you can scale up (increase) the number of enabled CPU cores in the system without impacting the availability of that system but you can't increase the storage. If the original DB system VM shape uses a single node, running databases on the DB system nodes are sequentially stopped and then restarted on the new shape so not dynamic

QUESTION 5

Which deployment architecture is offered when you deploy the Platform Service Manager based Database Cloud Service (DBCS) onto Oracle Cloud Infrastructure?

- A. Two node Primary RAC database leveraging ACFS for the shared file system
- B. Single Instance database with a Single Instance Data Guard in Maximum Performance mode
- C. Single Instance database with a Single Instance Data Guard in Maximum Protection mode
- D. Two node Primary RAC database with a two node RAC Data Guard Standby in Maximum Performance mode

Correct Answer: D
