

1Z0-1096-22^{Q&As}

Oracle Machine Learning using Autonomous Database 2022 Specialist

Pass Oracle 1Z0-1096-22 Exam with 100% Guarantee

Free Download Real Questions & Answers **PDF** and **VCE** file from:

<https://www.geekcert.com/1z0-1096-22.html>

100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Oracle
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which step is not required to be performed by an administrator when adding a new user to Oracle Machine Learning (OML) Notebooks?

- A. Provide the user with Autonomous Database client wallet for remote credentials.
- B. Add the user's name and email ID in the Oracle Machine Learning User Management interface.
- C. Create an OML username and password for the user in the Oracle Machine Learning User Management interface.
- D. Issue grant commands on tables from other schemas to allow access from shared notebooks.

Correct Answer: A

QUESTION 2

Which two statements are true about supervised machine learning?

- A. There is no previously known result to guide the algorithm in building the model.
- B. It does not specify a target, it can be applied to a population of interest.
- C. It is used to extract meaningful insights from raw data to improve data operational efficiency.
- D. It generally results in predictive models.
- E. The learning process is directed by a previously known dependent attribute or target.

Correct Answer: DE

Explanation: Supervised learning is also known as directed learning. The learning process is directed by a previously known dependent attribute or target. Directed data mining attempts to explain the behavior of the target as a function of a set of independent attributes or predictors. Supervised learning generally results in predictive models. This is in contrast to unsupervised learning where the goal is pattern detection. The building of a supervised model involves training, a process whereby the software analyzes many cases where the target value is already known. In the training process, the model "learns" the logic for making the prediction. For example, a model that seeks to identify the customers who are likely to respond to a promotion must be trained by analyzing the characteristics of many customers who are known to have responded or not responded to a promotion in the past.

QUESTION 3

A supermarket needs to segment its customers based on their purchasing pattern. Which machine learning technique should you use to achieve this?

- A. Clustering
- B. Regression
- C. Association Rules

D. Anomaly Detection

Correct Answer: D

QUESTION 4

Which two components support in-database automatic machine learning (AutoML) functionality?

- A. OML4SQL
- B. OML4Py
- C. OML4R
- D. OML Services a
- E. OML AutoML UI
- F. Oracle Data Miner

Correct Answer: BE

QUESTION 5

Which feature of Oracle Machine Learning Notebooks should you use for data analysis, data discovery, data visualization, and collaboration on Oracle Autonomous Database?

- A. Workspace
- B. Notebook
- C. Job
- D. Project

Correct Answer: B
