### QUESTION 1

Which OCI services can encrypt all data-at-rest ? Select TWO correct answers

- A. File Storage
- B. NAT Gateway
- C. Block Volumes
- D. Geolocation Steering

Correct Answer: AC

---

### QUESTION 2

What do the features of OS Management Service do?

- A. Add complexity in using multiple tools to manage mixed-OS environments.
- B. Provide paid service and support to OCI subscribers for fixes on priority.
- C. Increase security and reliability by regular bug fixes.
- D. Encourage manual setup to avoid machine-induced errors.

Correct Answer: C

---

### QUESTION 3

Bot Management in OCI provides which of the features? Select TWO correct answers.

- A. Bad Bot Denylist
- B. CAPTCHA Challenge
- C. IP Prefix Steering
- D. Good Bot Allowlist

Correct Answer: BD

# Bot Management

Bot Management enables you to mitigate undesired bot traffic from your site using CAPTCHA and JavaScript detection tools while enabling known published bot providers to bypass these controls.

Non-human traffic makes up most of the traffic to sites. Bot Manager is designed to detect and block, or otherwise direct, non-human traffic that can interfere with site operations. The Bot Manager features mitigate bots that conduct content and price scraping, vulnerability scanning, comment spam, brute force attacks, and application-layer DDoS attacks. You can also manage the good bot whitelist.

## ⚠ Caution

When you enable Bot Management, you incur a higher rate on requests to the WAF.

See these topics for more information about Bot Management:

## QUESTION 4

As a Security Admin you want to inspect the metadata and actual data in your Oracle databases to discover sensitive data and provide comprehensive results listing the sensitive columns and related information. Which Data Safe feature will help you to achieve the above requirement ?

- A. Data Masking
- B. Data Discovery
- C. Security Assessment
- D. User Assessment

Correct Answer: B

### About Data Discovery

Protecting sensitive data begins with knowing what sensitive data you have, and where it is located. Data Discovery inspects the metadata and actual data in your Oracle databases to discover sensitive data and provides comprehensive results listing the sensitive columns and related information.

Data Discovery uses sensitive types that define the kinds of data to look for. Oracle Data Safe provides over 125 predefined sensitive types that you can use to search sensitive data. The sensitive types cover personal data pertaining to identification, biographic, IT, financial, healthcare, employment, and academic information. You can also create your own sensitive types. The predefined sensitive types are organized under categories, making it easy to find and use relevant sensitive types. You tell Data Discovery what to look for, and it finds the sensitive columns that meet your criteria.
