QUESTION 1

What is the minimum and maximum number of steps that can be configured on a Guided process?

- A. Minimum 1 and maximum 50
- B. Minimum 1 and maximum 10
- C. Minimum 4 and maximum 10
- D. Minimum 2 and maximum 25

Correct Answer: B

A Guided process is a component that guides users through a series of steps to complete a task or a workflow. A Guided process can have a minimum of one step and a maximum of 10 steps. Each step can have a label, an icon, an optional description, and an optional action. A Guided process can also have optional buttons for navigation or completion. Therefore, option B is the correct answer. References: [Guided Process Component], [oj-sp-guided-process]

QUESTION 2

What are the two merits of modifying an Oracle Fusion Apps page in Visual Builder Studio? (Choose two.)

- A. You can remove any UI component from the page.
- B. You can edit any UI component anywhere on the page.
- C. You can only edit areas that were set for configurations by Oracle.
- D. You can conditionally hide/show fields in dynamic tables and forms.

Correct Answer: CD

Modifying an Oracle Fusion Apps page in Visual Builder Studio has some advantages over modifying it directly in Fusion Apps. One of them is that you can only edit areas that were set for configurations by Oracle, which ensures that you do not break any functionality or violate any design principles of the original page. Another one is that you can conditionally hide/show fields in dynamic tables and forms, which allows you to customize the UI based on user roles or preferences. QUESTION 3

Which is the correct sequence of steps in the Design process?

- A. Articulate the vision, understand the problem, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world
- B. Understand the statement, articulate the problem, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world

C. Articulate the vision, identify the Redwood Page templates, understand the problem, add the detail and refine the design, specify the design for development, and monitor engagement in the real world

D. Understand the problem, articulate the vision, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world

Correct Answer: D

The correct sequence of steps in the Design process is: Understand the problem Articulate the vision Identify the Redwood Page templates to use Add the detail and refine the design Specify the design for development Monitor engagement in the real world This is the recommended process for designing with Redwood, as it helps you to create user interfaces that are aligned with your vision, goals, and requirements. It also helps you to leverage the Redwood design system, templates, patterns, and components to ensure consistency, usability, and accessibility. QUESTION 4

You are looking to create a Foldout layout in a page emulating the one in Oracle Fusion Cloud Apps.

How will you do it?

A. Use JavaScript code to animate the various panels on your page.

B. Use a welcome template and add the foldout template inside it.

C. Use the horizontal Foldout page template pattern.

Correct Answer: C

The easiest way to create a Foldout layout in a page emulating the one in Oracle Fusion Cloud Apps is to use the horizontal Foldout page template pattern. This is a predefined pattern that provides a horizontal fold animation for pages with multiple panels of data. You can drag and drop this pattern from the Components palette in Visual Builder Studio and configure it according to your needs. QUESTION 5

Which three patterns are used in the Redwood Reference App? (Choose three.)

A. Start Page

B. Dashboard Landing Page

C. Vertical Foldout

D. Welcome Page

E. Smart Filter and Search

F. Data Grid Page

Correct Answer: ABE

This question tests your knowledge of the Redwood patterns that are used in the Redwood Reference App, which is a sample application that showcases the Redwood design system and the best practices for creating engaging user

interfaces with Visual Builder Studio. The correct answer is A, B, and E, because these are the three patterns that are used in the Redwood Reference App. The other options are incorrect, because they are not patterns, but components or

templates that can be used in different contexts.

Here is a brief description of each pattern:

Start Page: This pattern is used to provide an overview of the app's functionality and allow users to start a task or a workflow. It consists of a header with a title and subtitle, a primary action button, and a grid of cards with icons and labels.

Dashboard Landing Page: This pattern is used to display key performance indicators (KPIs) and a dashboard grid with information visualizations that highlight and explain business performance. It consists of a header with a title and subtitle,

a primary action button, an in-flow back button, and a dashboard grid with charts, gauges, or tables.

Smart Filter and Search: This pattern is used to enable users to filter and search data based on various criteria and see the results in a table or a list. It consists of a header with a title and subtitle, a smart filter bar with input fields and chips,

an optional search bar with suggestions, and a data grid or list with pagination and sorting.
