QUESTION 1

Which three domain requirements can you implement with the Configuration Wizard? (Choose three.)

- A. Create a Node Manager and enroll it with the domain
- B. Create a domain using a custom template
- C. Assign virtual IP addresses to all servers
- D. Distribute domain files across multiple machines
- E. Create a dynamic cluster of five servers

Correct Answer: ABD

QUESTION 2

Consider a WebLogic Java EE application that uses a JDBC data source.

Which three steps would the application developer typically write code to perform? (Choose three.)

- A. Test the connection to verify the database's availability
- B. Add a new connection to the data source if none are available
- C. Close the connection to return the connection to the data source
- D. Request a connection from the data source
- E. Look up the data source using the JNDI name

Correct Answer: ADE

QUESTION 3

An application fails. The exception indicates that the JDEM data source cannot be found. Identify two possible steps that you can perform to verify the data source's availability.

- A. Launch the JDBC Diagnostics utility.
- B. Verify the Dependencies attribute of the data source.
- C. View the target server's JNDI tree in the console.
- D. Verify that the application and data source have the same target.

Correct Answer: CD

QUESTION 4

One of your applications sends SQL requests to a back-end database. Today some of these requests are very slow to complete and users are waiting an unusually long time before getting the information back. You decided to take a look at a thread dump and found several threads with a stack similar to:

```
[STUCK] ExecuteThread: '24' for queue: 'weblogic.kernel.Default (self-tuning)' id=72 idx=0x128 tid=17240 prio=1 alive, in native, daemon
Java.net.SocketInputStream.socketRead0(Native Method)
Java.net.SocketInputStream.read(SocketInputStream.java:129)
Oracle.net.ns.Packet.receive(Unknown Source)
Oracle.net.ns.DataPacket.receive(Unknown Source)
Oracle.net.ns.NetInputStream.getNextPacket(Unknown Source)
...
Oracle.net.ns.NetInputStream.read(Unknown Source)
Oracle.jdbc.driver.T4CMAREngine.unmarshalUB1(T4CMAREngine.java:1099)
...
Oracle.jdbc.driver.OracleDriver.connect(OracleDriver.java:801)
Java.sql.DriverManager.getConnection(DriverManager.java:140)
...
```

What should be your initial assumption and first action?

- A. The maximum capacity of the connection pool was reached due to higher load than usual and you just need to wait until new connections get released or increase the capacity of the pool. This can be done in the Admin Console.
- B. The response data provided by the database SQL is larger than the receive socket buffer, so you just need to increase the buffer
- C. The activity on the database side needs to be checked with your DBA to verify if the connection request was received and how it's been handled by the database
- D. The datasource connection was leaked and needs to be reset
- E. A firewall is blocking the connection between WebLogic Server and the back-end database. This needs to be immediately addressed with your network administrator
- F. The Oracle JDBC driver got corrupted and needs to be reinstalled or replaced with a different driver

Correct Answer: B

QUESTION 5

You use the administration console to start a managed server. Select the three statements that must be true.

- A. In the domain configuration, the managed server is assigned to a machine.
- B. The Node Manager process is running on the administration server's machine.
- C. The Node Manager process is running on the managed server's machine.

D. The administration server uses one way SSL to communicate with the Node Manager.

E. In the domain configuration, the Node Manager has been configured for the machine.

F. You have configured the Java based Node Manager. The administration console cannot communicate with the script - based Node Manager.

Correct Answer: ACE
