QUESTION 1

Examine the structure of the TEST_DETAILS table: Name Null? Type

TEST_ID NUMBER

DESCRIPTION CLOB

DESCRIPTION data was entered earlier and saved for TEST_ID 12.

You execute this PL/SQL block to add data to the end of the existing data in the DESCRIPTION

column for TEST_ID 12:

```
DECLARE
```

```
clob_loc CLOB;
```

```
buf CHAR(12);
```

```
BEGIN
```

```
SELECT description INTO clob_loc FROM test_details WHERE test_id = 12 ;
```

```
buf := '\\0123456789\\';
```

```
DBMS_LOB.WRITEAPPEND(clob_loc,DBMS_LOB.GETLENGTH(buf), buf);
```

```
COMMIT;
```

```
END;
```

```
/
```

It generates an error on execution.

What correction should you do to achieve the required result?

- A. WRITEAPPEND must be replaced with APPEND.
- B. The BUF variable data type must be changed to CLOB.
- C. FOR UPDATE must be added to the SELECT statement.
- D. The GETLENGTH routine must be replaced with the LENGTH built-in function in WRITEAPPEND.

Correct Answer: C

QUESTION 2

Which two statements are true about the migration of BasicFile to the SecureFile format by using the DBMS_REDEFINITION package? (Choose two.)

- A. It can be performed only on tables with a single LOB column.
- B. It automatically creates an interim table during the migration process.
- C. It allows the table that is migrated to be accessed throughout the migration process.
- D. It requires free space that is at least equal to the space used by the table that is migrated.
- E. It requires all constraints defined on the original table to be re-created manually after the migration.

Correct Answer: CD

QUESTION 3

When do you use static SQL as a technique for avoiding SQL injection?

- A. when the WHERE clause values are unknown
- B. when the code contains data definition language (DDL) statements
- C. when all Oracle identifiers are known at the time of code compilation
- D. when the SET clause values are unknown at the time of code compilation

Correct Answer: C

QUESTION 4

To examine the dependencies between all PL/SQL objects and the tables and views they reference, you executed the following query as the user OE:

```
SQL> SELECT owner || '\' || NAME refs_table
, referenced_owner || '\' || referenced_name AS table_referenced
FROM all_dependencies
WHERE owner = USER
AND TYPE IN ('\PACKAGE\','PACKAGE BODY\','PROCEDURE\','FUNCTION\')
AND referenced_type IN ('\TABLE\','VIEW\')
AND referenced_owner NOT IN ('\SYS\','SYSTEM\')
ORDER BY owner, NAME, referenced_owner, referenced_name;
```

Which statement is true about the output of the query?

- A. It displays all PL/SQL code objects created by user OE that reference any table or view owned by other users except SYS and SYSTEM..
- B. It displays no rows because this query needs to be executed as the user SYS for required results.

- C. It displays all PL/SQL code objects that reference a table or view directly for all the users in the database.
- D. It displays only those PL/SQL code objects created by the user OE that reference a table or view created by the user SYS.

Correct Answer: A

QUESTION 5

View Exhibit1 and examine the structure of the EMPLOYEES and DEPARTMENTS tables existing in your schema.

View Exhibit2 and examine the PL/SQL block that you execute to display the department-wise incremented salary for all the departments in your company.

The code generates an error on execution.

What correction should be done to ensure the code executes successfully?

- A. The cursor variable parameter should be passed in IN OUT mode.
- B. The cursor variable should be defined as a strong REF CURSOR type.
- C. The cursor variable name passed as actual and formal parameters should be identical.
- D. The %NOTFOUND cursor attribute cannot be used with the cursor variables and should be replaced with a user defined exception.

Correct Answer: A
