QUESTION 1

.com is part of a Business Group with a dozen inventory organizations. It uses `Item Status` to control the life cycle of a product. It is facing problems when updating attributes for an item, such as `Build in WIP`. They have tried applying a newly created template, as well as Updating the Attribute in the Master Item level. Which three options do they need to verify to troubleshoot this issue? (Choose three.)

- A. Check that the Inventory Transactable attribute is set to YES.
- B. Check the Item Attribute control settings.
- C. Check the organizations inventory balance for the items.
- D. Check that item attributes are enabled on the item template.
- E. Check for errant miscellaneous receipts and issues that distort the items correct inventory position.
- F. Check the Inventory Profile: Default Status.

Correct Answer: BCD

QUESTION 2

.com has a factory that is set up as an inventory organization with several subinventories. Each of the subinventories has locators. The factory purchases material using a purchase order. The person who receives the purchase order does not know which subinventory and locator the material needs to go to. ABC wants the subinventory and locator to be automatically populated for that item. Which option would solve the problem?

- A. Populate the supply subinventory and locator fields on the Item Master record for the purchased item.
- B. Populate the completion subinventory and locator on the routing for that item.
- C. Use the restrict subinventory and restrict locator flag on the Item Master record of that item.
- D. Use the Item Transactions Default form to create default subinventory and locators for the purchased item.

Correct Answer: D

QUESTION 3

.com has a factory that is set up as an inventory organization with several subinventories. Each of the subinventories has locators. The factory purchases material using a purchase order. The person who receives the purchase order does not know which subinventory and locator the material needs to go to. .com wants the subinventory and locator to be automatically populated for that item. Which option would solve the problem?

- A. Use the restrict subinventory and restrict locator flag on the Item Master record of that item.
- B. Populate the supply subinventory and locator fields on the Item Master record for the purchased item.
- C. Populate the completion subinventory and locator on the routing for that item.

D. Use the Item Transactions Default form to create default subinventory and locators for the purchased item.

Correct Answer: D

QUESTION 4

Which is the key setup required in order to restrict the access to an inventory organization by a user? (Choose one)

- A. System administrator assigns the appropriate responsibility to a user.
- B. System administrator sets up an appropriate securing attribute value for the user application under the user definition.
- C. System administrator sets up a restricted profile value for the user responsibility at the user level.
- D. A superuser sets up the organization access to the inventory organization for the user responsibility.

Correct Answer: D

QUESTION 5

Which two statements are true about the Managing Shipments process? (Choose two.)

- A. You can update information pertaining to the shipment header and the shipment lines.
- B. You can access all incoming and outgoing in-transit shipments between inventory organizations associated with the current organization.
- C. If you change the Expected Receipt date, you can control whether Purchasing updates Shipment Supply to reflect the new due date.
- D. In-transit shipment between inventory organizations must use the receipt routing specified at the item, organization, or system level.

Correct Answer: AB
