QUESTION 1

You are reviewing an Automatic Database Diagnostic Monitor report. What is DB Time% a percentage of?

- A. total CPU time
- B. elapsed response time
- C. total time in database calls by all processes
- D. total time in V\$ views
- E. time that users wait for the database to respond

Correct Answer: C

QUESTION 2

IT Operations had observed short CPU spikes and I/O storms prior to a retail website outage. Which functionality of Diagnostics Pack for Oracle Databases would you implement to diagnose and resolve the customers issue?

- A. Active Workload History to collect SQL at the time of its execution.
- B. SQL Performance Analyzer to capture the information in the SGA, the sessions active, and analyze the SQL executing.
- C. Oracle Workload Advisor that automatically turns on and captures the offending SQL Statements when thresholds are reached.
- D. Active Session History to capture sessions and dump the SQL executing, performance attributes and relevant information into a buffer for analysis.
- E. Active SQL History Analyzer to do perform a comparison of SQL statements before and after.
- F. Oracle Exadata, as it already includes Diagnostic Pack for Oracle Database.

Correct Answer: F

QUESTION 3

When providing partition and index recommendations, which one would SQL Access Advisor source input from?

- A. SQL Tuning Advisor
- B. Automatic Workload Repository
- C. Automatic Database Diagnostic Monitor
- D. SQL Tuning Set

Correct Answer: D

QUESTION 4
