QUESTION 1

Which two statements are true after rolling back an application module? (Choose two.)

- A. The associated view object iterators for the application module have their current row indicators reset to the first row.
- B. All entity object caches for the associated view objects of the application module are emptied.
- C. Any attribute changes to entity objects for the associated view objects of the application module are reset to their original values.
- D. The application module is passivated.
- E. New or deleted records are unaffected by the rollback.

Correct Answer: BC

QUESTION 2

Identify three statements that are true about JSF. (Choose three.)

- A. Components are used to define page structure.
- B. Navigation between pages is defined outside of the JSF page in the metadata.
- C. Managed beans can have only one of two memory scopes.
- D. Managed beans can be accessed from more than one page.
- E. JSF does not support template creation for pages.

Correct Answer: ABD

QUESTION 3

Which code sample is the recommended way to override the createQ method in EmployeesImpl, an implementation of oracle.jbo.serverEntityImpl for the Employee?

- A. `protected void create(AttributeList attributeList) { SetAttributeInternal (SALARY, 0); super.create (attributeList); }`
- B. `protected void create(AttributeList attributeList) { super.create(attributeList), setAttributeInternalC\\\"SALARY\", 0);}`
- C. `protected void create(AttributeList attributeList) { super.create(attributeList); setSalary(0); }`
- D. `protected void create(AttributeList attributeList) { setSalary(0);}`

Correct Answer: B

QUESTION 4

You need to execute a managed bean function immediately when af:selectBooleanCheckbox is selected by a user. Which listener property would you implement?

- A. valueChangeListener
- B. selectionListener
- C. actionListener
- D. queryListener
- E. phaseListener

Correct Answer: A

QUESTION 5

The current page includes the following entries in its page definition file:

Programmatically, in a managed bean, you need to read the current EmployeesView's email into a string.

You write the following code to do this:

```
DCBindingContainer bc = (DCBindingContainer)BindingContext.getCurrent  
().getCurrentBindingsEntry();  
XXXXXX emailBinding =
```
