QUESTION 1

You are asked to build an adaptive design into an MAF application. The requirement is to show amultipage wizard for an MAF application functionality when the application runs on a smartphone and a single page layout for the same functionality when the application runs on a tablet.

Which two options allow you to implement this use case?

A. A Feature can have multiple contents (AMX pages, AMX Task Flow, and so on). A content constraint can be defined on the first content to hide when the application runs on a smartphone and to show when it runs on a tablet. This way, thefirst content configured for a Feature holds the single page layout, whereas the second (with no constraints defined) has the multipage wizard function.

B. A Feature LifecycleListener class can be created and configured to load AMX content upon application start. In this case, Java, using the AdfmfContainerUtilities framework helper class, determines the type of device to be smartphone tablet and switches the content.

C. Two MAF Features can be created, one for the single page view and the other for the multipage wizard. Constraints defined on the feature configuration conditionally switch between the two options.

D. Selecting the Enable Adaptive Design check box in themaf-application.xmlfile visual editor allows you to configure constraints on the application level that, upon application start, tell the framework which MAF Features to load when the application is started on a smartphone and which Features to load when the application is started on a tablet.

Correct Answer: BD

QUESTION 2

Which three are correct practices by developers who are creating a MAF application?

A. using CSS files to override out-of-the-box styles rather than specifying custom styles in the inline style property of the individual UI component

B. avoiding using large images in the application

C. loading all of the application data from the server in one calltoavoid having to call the same service to retrieve data again

D. caching data in the local database when network reliability is suspect

E. exposing server data through SOAPservices rather than using REST because WSDL provides better payload documentation

Correct Answer: ABD

QUESTION 3

You have been asked to select the appropriate security policy to apply to a SOAP web service data control. The web service is accessed over HTTPS. In addition,the web service calls must use the same single sign-on infrastructure as the other web applications deployed on the network. That way, users will not have to authenticate again if they navigate between remote URL features and AMX features making web service calls.

Which policy would you choose?

A. oracle/wss_http_token_over_ssl_client_policy

B. oracle/wss_username_token_client_policy

C. oracle/soap_over_ssl_client_policy

D. oracle/wss11_message_protection_client_policy

Correct Answer: A

QUESTION 4

Which three technologies does Oracle Mobile Suite use for data shaping?

A. XQuery

B. XSLT

C. MFL

D. MAF

E. JavaScript Schema

Correct Answer: ABC

QUESTION 5

TheDataBindings.cpxfile contains _____.

A. a mapping of AMX pages to theirpagedef.xmlfiles and the data controls used in the UI layer

B. a list of all the data controls defined in an application

C. code to control the order of data control initialization

D. information about the local SQLite database data used in the application

E. mapping between individual UI components and the data controls they use

Correct Answer: C
