#### QUESTION 1

Identify two characteristics of a responsive mobile application design.

- A. adjusts the back-end access to services based on the protocol being used
- B. adjusts the mobile UI based on the device orientation
- C. responds to user gestures such as tap and hold or swipe
- D. adjusts the mobile UI based on screen size
- E. immediately responds to changes the user makes to a field value in the UI layer.

Correct Answer: CE

---

#### QUESTION 2

In an AMX page, you want to hide/show a button based on the mobile device having a camera. Which is a valid EL expression to test for the camera?

- A.
- B.
- C.
- D.

Correct Answer: A

---

#### QUESTION 3

Which technology can be used to transform data from comma-separated values (CSV) into XML?

- A. XQuery
- B. XSLT
- C. MFL
- D. MAF

Correct Answer: A

---

#### QUESTION 4

You are asked to build an adaptive design into an MAF application. The requirement is to show a multipage wizard for an MAF application functionality when the application runs on a smartphone and a single page layout for the same functionality when the application runs on a tablet.

Which two options allow you to implement this use case?

A. A Feature can have multiple contents (AMX pages, AMX Task Flow, and so on). A content constraint can be defined on the first content to hide when the application runs on a smartphone and to show when it runs on a tablet. This way, the first content configured for a Feature holds the single page layout, whereas the second (with no constraints defined) has the multipage wizard function.

B. A Feature LifecycleListener class can be created and configured to load AMX content upon application start. In this case, Java, using the AdmfContainerUtilities framework helper class, determines the type of device to be smartphone tablet and switches the content.

C. Two MAF Features can be created, one for the single page view and the other for the multipage wizard. Constraints defined on the feature configuration conditionally switch between the two options.

D. Selecting the Enable Adaptive Design check box in the maf-application.xml file visual editor allows you to configure constraints on the application level that, upon application start, tell the framework which MAF Features to load when the application is started on a smartphone and which Features to load when the application is started on a tablet.

Correct Answer: BD

---

#### QUESTION 5

Which is a feature of Oracle Mobile Application Framework?

A. It provides a simple Objective-C coding experience.

B. It provides a choice between the two development languages, Java and JavaScript.

C. It enables you to run Android Dalvik Java code on iOS.

D. It enables you to create web mobile pages that are served from a Java EE server.

E. It leverages PL/SQL to create on-device applications.

Correct Answer: B
