A. The Kickstart installation method helps to speed boot time after the system restarts.

B. A Kickstart file is created for every installation.

C. The Kickstart Configurator can be used to create or make changes to a kickstart file.

* A kickstart installation requires a kickstart file that contains the answers to every question asked during an interactive installation. Kickstart files can be created in one of three ways:

/ Perform an interactive installation. Once complete you will find the Kickstart configuration file for the

installation you just completed in the "/root/anaconda-ks.cfg" file. This can be amended and used for

subsequent installations. (B)

/ Create a Kickstart file in a text editor manually, or based on a copy of a previous file.

/ Use the Kickstart Configurator. (C)

D:

* Kickstart installations provide an automated alternative to the normal interactive installations of RHEL and Oracle Linux. The automation of installation and post installation configuration steps represents a considerable time saving in situations where many similar installations are performed.
