QUESTION 1

You are responsible for a small marketing website that was built WebCenter Sites that consists of page assets and page templates. The site is fully cachaed and does not use an uncachedSiteEntry wrapper. The Marketing department has requested that you make the site responsive such that visitor experience is good even when you web pages are viewed on other devices, including tablets and mobile phones. You are tasked with designing an inexpensive solution that does not impact performance,add more hardware, change the asset model, or impact the contributor\'s current workload or the process that creates the web pages.

What would you do to address their requirements?

A. Refactor your page templates to use a third party JavaScript or CSS framework such as Foundation 3 or CSS3 media queries.

B. Add browser detection logic to an uncached JSP SiteEntry wrapper, which then dispatches to one of three different page templates: one designed specifically for computers, one for tablets, and one for mobile phones. No third party framework is used.

C. Create three different contribution sites, one for each device, and map them to a specific subdomain, such that all "mobile.xxx.com" requests get forwarded to the mobile site, all "tablet.xxx.com" requests get forwarded to the tablet site, and so on. No third party framework is used.

D. Install an additional WebCenter Sites mobility server environment.

Correct Answer: A
