Correct Answer: A

## QUESTION 5

Your customer is a financial services company that uses a large compute grid (not Coherence) to do risk calculations. Objects representing risk scenarios are cached in Coherence. When these objects are updated, they are sent to the compute grid to recalculate risk via a continuous query cache. Assume that there are 100 compute servers in one data center and 100 GB of cached data. The customer is not worried about potential cluster instability, given their network design.

Which solution supports the customer's requirements? Keep in mind licensing costs and features by edition.

- A. Coherence Standard Edition. Nothing special is needed and Standard Edition is the low- cost option.
- B. Coherence Enterprise Edition, with the compute grid clients being storage-disabled cluster members.
- C. Coherence Grid Edition, with the compute grid clients being storage-disabled Coherence cluster members.
- D. Coherence Enterprise Edition, with the compute grid running against a set of Coherence\*Extend proxies and continuous query cache on Coherence\*Extend clients.

Correct Answer: A
